# Traffic Count Taken In 2014

Traffic counts are used by various parties to perform traffic analyses. The counts shown on this map were counted mechanically. Mechanical counts are performed by placing rubber hoses in the roadway perpendicular to traffic flow. As vehicles travel over the hoses, air pulses pushed through the hoses activate switches in a counting device and the vehicles are recorded.

154 locations are counted once per year for a seven day period. A three-day midweek average volume is then computed. Each number on this map represents the total traffic volume, at that location, for both directions over a 24-hour period on an average midweek day in Bellevue.

3,800
