# City of Bellevue Light Rail Study: B7 - Revised Alternative

ARUP

The City of Bellevue is studying a proposed variation of the B7 alternative studied by Sound Transit.

## The study will:

- Determine if design changes to B7 can improve performance, reduce costs, and reduce impacts
- Consists of conceptual engineering, environmental screening, ridership analysis, and cost estimating

## Key elements include:

- A new station and park-and-ride (near the Bellevue Way/I-90 Interchange) in Enatai
- A route across the Mercer Slough and along the BNSF right-of-way
- An approach to downtown Bellevue along 114th Ave SE
- An at-grade station near the Red Lion site and a transition into a downtown tunnel portal at SE 2nd Street.
