Background

Engineering design staff will give a brief presentation on the Sewer Lake Line Study. The objective is to inform the Environmental Services Commission of the Utility's Sewer Lake Line Replacement CIP program (CIP Plan No. S-58). The presentation will provide background on the lake line system, challenges regarding maintenance and rehabilitation of these pipelines, and the need to assess lake line condition and develop a strategy for future renewal and replacement. Staff will also provide current project status, schedule, and proposed methods of lake line condition assessment and mapping to take place during 2011/2012.
