Acronyms and Abbreviations

AST	aboveground storage tank
ASTM	ASTM International
bgs	below ground surface
BTEX	benzene, toluene, ethylbenzene, and xylenes
City	City of Bellevue
CSCSL	Confirmed and Suspected Contaminated Sites List
Ecology	Washington Department of Ecology
EDR	Environmental Data Resources, Inc.
HSL	Hazardous Sites List
ICR	independent cleanup report
ID	identification
LUST	leaking underground storage tank
MTCA	Model Toxics Control Act Cleanup Regulation
NFA	No Further Action
PAHs	polycyclic aromatic hydrocarbons
ppb	parts per billion
PCBs	polychlorinated biphenyls
PNEC	Pacific Northern Environmental Corporation
RCRA	Resource Conservation and Recovery Act
SR	State Route
TCLP	Toxicity Characteristic Leaching Procedure
TSD	treatment, storage, and disposal
UST	underground storage tank
VCP	voluntary cleanup program
WAC	Washington Administrative Code
WSDOT	Washington State Department of Transportation

1

2 This report identifies properties in and around the project area where current or
3 past property uses may have resulted in hazardous materials contamination, and
4 assesses the likelihood that hazardous materials may be disturbed or
5 encountered during construction of the proposed project.

6 Based on a windshield survey and a review of historical and regulatory records, a
7 list of 36 sites of concern was compiled. These sites include dry cleaners,
8 automobile dealerships, auto repair shops, gasoline stations, print shops, sites
9 with heating oil use, and existing railroad spurs.

10 Twenty-five of the sites of concern are considered a low risk to the project.
11 Acquisition of these properties is limited to strips of land along the road
12 alignment to expand the roadway.

13 Nine of the sites of concern are considered a moderate risk to the project. Two of
14 these sites may be purchased for the project; acquisition of the remaining
15 moderate risk sites will be limited to strips of land along the road alignment.
16 These sites were ranked as posing a moderate risk typically because they had
17 historic or current land uses of concern and excavation was proposed on these
18 properties for retaining walls, cut slopes, or other ground improvements.

19 Two high-risk sites of concern were identified for this project: a former dry
20 cleaning plant and a former gas/service station. The former dry cleaning plant is
21 considered a high risk because of the relatively high expense of remediating
22 solvent contamination and because the City of Bellevue (City) may acquire this
23 site. The former gas/service station site is considered a high risk to the project
24 because (a) known gasoline- and diesel- range petroleum, benzene, mineral
25 spirits, and chlorinated solvent contamination is present on the property and
26 may be migrating off-site, (b) the former gasoline underground storage tanks
27 may still be present on site, and (c) the City may acquire this property.

28 Mitigation measures include reducing the amount of soil excavation required for
29 the project, conducting further investigations in proposed excavation areas to
30 determine whether contamination is present, and conducting further
31 investigations on properties that may be acquired to determine the
32 concentrations and extents of contamination on these sites and to determine
33 whether contamination has migrated to adjacent properties. Based on this
34 knowledge, the City may be able to negotiate cleanup responsibilities and costs
35 with the existing owners prior to property purchase.

36 Construction monitoring is recommended on all sites of concern in the 120th
37 Avenue NE right-of-way where clearing and grading are proposed. In accordance
38 with the Washington State Department of Transportation Standard
39 Specifications, the City or the general contractor will complete a spill prevention
40 control and counter measures plan for dealing with hazardous materials.

1.0

Introduction

1.1 Purpose of This Report

This Hazardous Materials Technical Report was prepared as part of the Bellevue Road 120th Avenue NE Corridor Project for the City of Bellevue (City). The project is located in Section 28, Township 28 North, Range 5 East, Willamette Meridian.

The purpose of this report is to (a) identify properties in and around the project area where current or past property uses may have resulted in hazardous materials contamination, and (b) assess the likelihood that hazardous materials may be disturbed or encountered during construction of the proposed project.

1.2 Hazardous Materials Policies and Regulations

The federal, state and local policies and regulations that apply to hazardous materials are discussed in Chapter 2 and include:

Federal Regulations:

- Comprehensive Environmental Response, Compensation, and Liability Act
- Superfund Amendments and Reauthorization Act
- Resource Conservation and Recovery Act (RCRA)
- Toxic Substances Control Act
- Occupational Safety and Health Act
- Clean Air Act
- Clean Water Act
- National Environmental Policy Act

Washington State Regulations:

- Model Toxics Control Act Cleanup Regulation (MTCA)
- Dangerous Waste Regulations
- Solid Waste Regulations
- Washington State Environmental Policy Act
- Water Pollution Control Act
- Washington Industrial Safety and Health Act
- Washington State Department of Transportation (WSDOT) Environmental Procedures Manual M31-11 (April 2007)

More information on each regulation is provided in Appendix A.

2.0

Proposed Project

2.1 Project Overview

The 120th Avenue NE Corridor Project (Segments 2 and 3) extends from just south of NE 8th Street to Northrup Way. The City proposes to widen the existing corridor from a two-lane roadway to a five-lane roadway. Figure 2-1 shows the project study area.

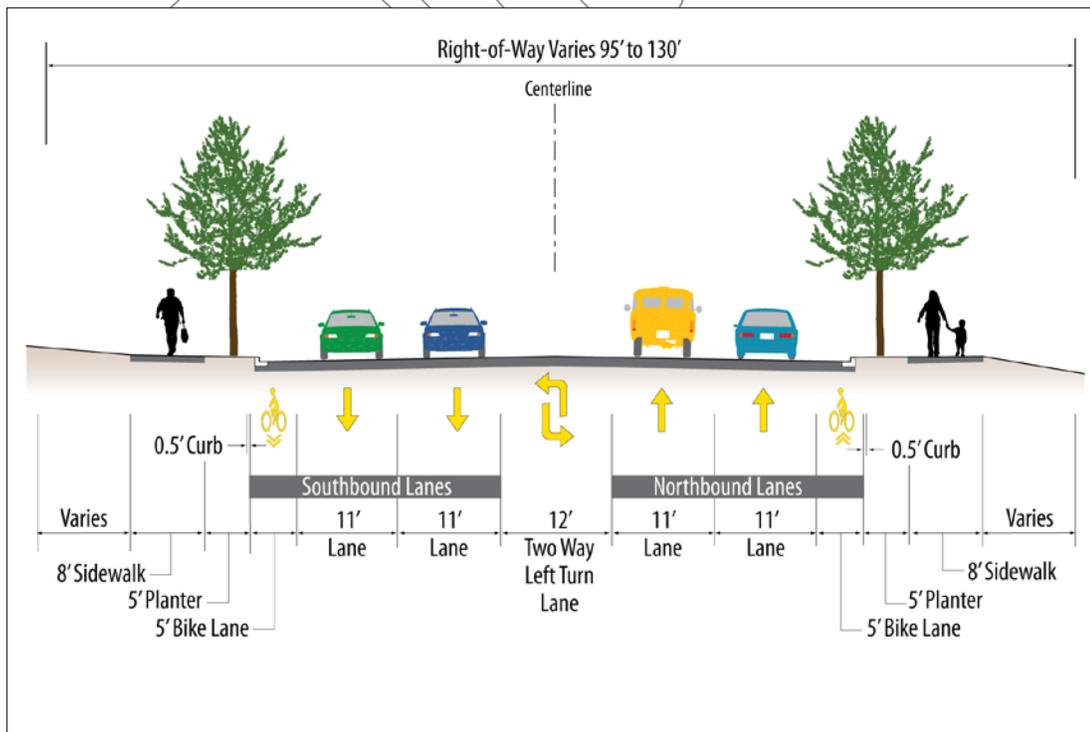

Figure 2-1. Project Study Area

1 The elements of the project include the following:

- 2 • Widen to five travel lanes (two travel lanes in each direction and a center
- 3 turn lane)
- 4 • Realign the roadway south of Bel-Red Road to improve intersection
- 5 operations at the NE 8th Street intersection
- 6 • Install continuous sidewalks and bicycle lanes on both sides of the street
- 7 designed to City arterial street standards
- 8 • Include planting strips on both sides of the roadway, and other green
- 9 spaces where possible
- 10 • Install storm drainage and water quality facilities that use natural
- 11 drainage practices
- 12 • Connect with and minimize adverse affects to open-space areas and
- 13 wetlands
- 14 • Accommodate new intersections with the planned NE 15th/NE 16th
- 15 Street Corridor and Sound Transit's East Link light rail line

16 Other project elements include illumination, landscaping, structural walls, traffic

17 signals, and new and relocated utilities (Figure 2-2).

18 **Figure 2-2. Typical Cross-Section**

19

1 The term “right-of-way,” as used in this report, includes both right-of-way owned
2 by the City and permanent easement, i.e. the complete footprint of the project.

3 Project construction would occur over a two-year period. It is assumed that
4 improvements from NE 8th Street to NE 12th Street would be completed and
5 opened to traffic prior to those from NE 12th Street to Northup Way. This
6 construction sequencing would minimize traffic impacts.

7 A minimum of one lane would be open for traffic in each direction along 120th
8 Avenue NE as the Project is constructed. The construction would occur on one-
9 half of the roadway at a time. Only Bel-Red Road would be closed for any length
10 of time (9 to 12 months) during the realignment of 120th Avenue NE near NE 8th
11 Street.

12 Generally, the work is anticipated to occur in the following sequences:

- 13 • Contractor Mobilization—Months 1 and 2
- 14 • NE 8th Street to NE 12th Street Improvements—Months 3-12:
 - 15 □ Traffic control and temporary erosion control
 - 16 □ Utility relocation/installation
 - 17 □ Roadway Side 1—Retaining walls, grading, paving, signals, and
18 illumination
 - 19 □ Roadway Side 2—Retaining walls, grading, paving, signals, and
20 illumination
- 21 • NE 12th Street to Northup Way Improvements—Months 13-24
 - 22 □ Traffic control and temporary erosion control
 - 23 □ Utility relocation/installation
 - 24 □ Roadway Side 1—Retaining walls, grading, paving, signals, and
25 illumination
 - 26 □ Roadway Side 2—Retaining walls, grading, paving, signals, and
27 illumination

28 The *Project Description Technical Report* contains a detailed description of the
29 project.

3.0

3.1 Methods Used in this Analysis

The project area studied for the hazardous materials analysis includes the proposed project footprint (i.e., where construction will occur), as well areas up to one mile from the project boundaries.

The following methods were applied to the effects analysis contained in this report. Reasons were provided for methods that varied from Washington Department of Transportation standards.

3.1.1 Historical Records Review

A land use profile was developed for the 120th Avenue NE corridor based on a review of historic records. Historical records reviewed include the following sources:

- Historical land use maps (Kroll Map Company, 1965 and 1998);
- Polk and Cole city directories (2005, 2000, 1996, 1990-91, 1985, 1980, 1975, 1970, 1964-65, 1959);
- Washington State Archive historical tax records (Puget Sound Archives 1900-1972);
- Sanborn Fire Insurance Maps (no coverage);
- Historical aerial photographs (full coverage: 1965, 1981, 1990, 1998, 2007; partial coverage: 1977, 1985); and
- Current topographic and geological maps.

See Appendix B for a summary of findings.

3.1.2 Windshield Survey

A windshield survey was performed to identify current uses in the project corridor likely to involve the use, treatment, storage, or disposal of hazardous materials and to verify the location of listed and orphan sites associated with the regulatory review, where possible. Detailed site investigations were beyond the scope of this evaluation.

All observations were made from public areas. Each property adjacent to the 120th Avenue NE alignment within the study area was viewed to compare the current tax assessor description of the site with observed site conditions. Current land uses that were likely to used or stored hazardous materials were also noted.

3.1.3 Regulatory Review

Federal and state databases were researched to identify properties with records of environmental enforcement; past or present underground storage tanks; and the generation, transportation, and storage of hazardous materials.

1 In July 2010, an environmental database research service, Environmental Data
2 Resources, Inc. (EDR), collected information for listed sites located within one
3 mile of the project boundaries, in accordance with the ASTM International
4 (ASTM) search radius guidance (ASTM E1527), see Appendix C. The EDR results
5 were not independently verified. See Appendix B for a summary of findings.

6 Based on the results of the EDR search, the following state databases were of
7 particular concern:

- 8 • **Confirmed and Suspected Contaminated Sites List (CSCSL).** This list
9 includes state hazardous waste site records and is Washington's
10 equivalent to the federal Comprehensive Environmental Response,
11 Compensation, and Liability Information System.
- 12 • **Hazardous Sites List (HSL).** The HSL is a subset of the CSCSL. It includes
13 sites that have been assessed and ranked using the Washington Ranking
14 Method.
- 15 • **Underground Storage Tank (UST) list.** This list identifies properties
16 that have registered USTs with Washington Department of Ecology
17 (Ecology). Information includes operational status, removal status, and
18 substances stored.
- 19 • **Leaking Underground Storage Tank (LUST) database.** LUST records
20 contain an inventory of reported leaking UST incidents along with cleanup
21 status and the medium (soil or groundwater) affected.
- 22 • **Independent Cleanup Reports (ICR).** These are remedial action reports
23 that Ecology has received from either the owner or operator of the sites.
24 These actions have been conducted without Ecology oversight or approval
25 and are not under an order or decree. This database is no longer updated
26 by Ecology.
- 27 • **Voluntary Cleanup Program (VCP) database.** These are sites that have
28 entered Ecology's VCP or its predecessor Independent Remedial Action
29 Program.

30 File review at Ecology was limited to the three tax parcels located between
31 Bellevue-Redmond Road NE and NE 8th Street where the 120th corridor will be
32 extended to connect to NE 8th Street. During preliminary records review, these
33 sites were identified as high risk to the project. See Appendix D for copies from
34 the Ecology records review. Review of Ecology files for other sites in the project
35 vicinity may be conducted at a later date.

36 **3.2 Site Screening**

37 Based on the historical records and regulatory database review findings, a list of
38 potential sites of concern was compiled. Several potential sites of concern were
39 eliminated as having a likely effect on the project based on the following
40 screening criteria:

- 41 • Sites listed only on the RCRA, FINDS, ALL SITES, and National Pollutant
42 Discharge Elimination System databases were eliminated. Inclusion on

1 these databases indicates that a site uses or generates regulated materials
2 as part of their business practice, but gives no indication of a hazardous
3 materials release.

- 4 • Sites located greater than 1/8 mile from the 120th Avenue NE project area
5 boundaries were eliminated due to the relatively high concentration of gas
6 stations, auto repair shops, drycleaners, and other potentially hazardous
7 sites within 1/8 mile of the project corridor. Some properties within
8 1/8 mile of the project corridor were also eliminated if they were
9 separated from the project corridor by two or more sites with similar
10 potential contaminants because it is unlikely that contamination
11 associated with these sites could be differentiated from contaminants
12 from closer sources.

13 After the screening was conducted, the remaining sites of concern were ranked as
14 having a low, moderate, or high potential risk to the project, in general
15 accordance with the WSDOT Guidance & Standard Methodology for WSDOT
16 Hazardous Material Discipline Reports (June 2009). As allowed under this
17 methodology, the risk rankings were modified to include the liability associated
18 with acquiring a site of concern.

19 **Low Risk Sites** are sites where a potential concern exists because of historical
20 activities, but either the likelihood for the site to impact the project is low or the
21 contamination was previously remediated.

22 **Moderate Risk Sites** include sites where: (a) current or former land uses have
23 likely used or stored hazardous materials; (b) insufficient information was
24 available to determine whether contamination would present in the project
25 corridor; and (c) excavation for retaining walls, slope cuts, or ground
26 improvements is anticipated on the property. Moderate sites also include sites
27 that are contaminated and may be acquired by the City, but the contamination is
28 from hazardous materials migrating from an adjacent site or where remediation
29 is considered relatively straightforward.

30 **High Risk Sites** are sites with a known concern because of historical activities,
31 contamination is known and extensive, and/or site contamination will likely
32 impact the project. In general, high impact sites are properties that possess a
33 potential for substantial soil, groundwater, or sediment contamination, or the
34 information necessary to predict remedial costs is lacking. The site may be
35 contaminated over a large area by a single contaminant or over a smaller area by
36 multiple contaminants. Potentially, high impact sites typically are large, have
37 large volumes of contaminated materials, or have a long history of industrial or
38 commercial use. We also included sites that the City may acquire where
39 contamination is likely to exist.

40

4.0

Existing Conditions

4.1 Physical Environment

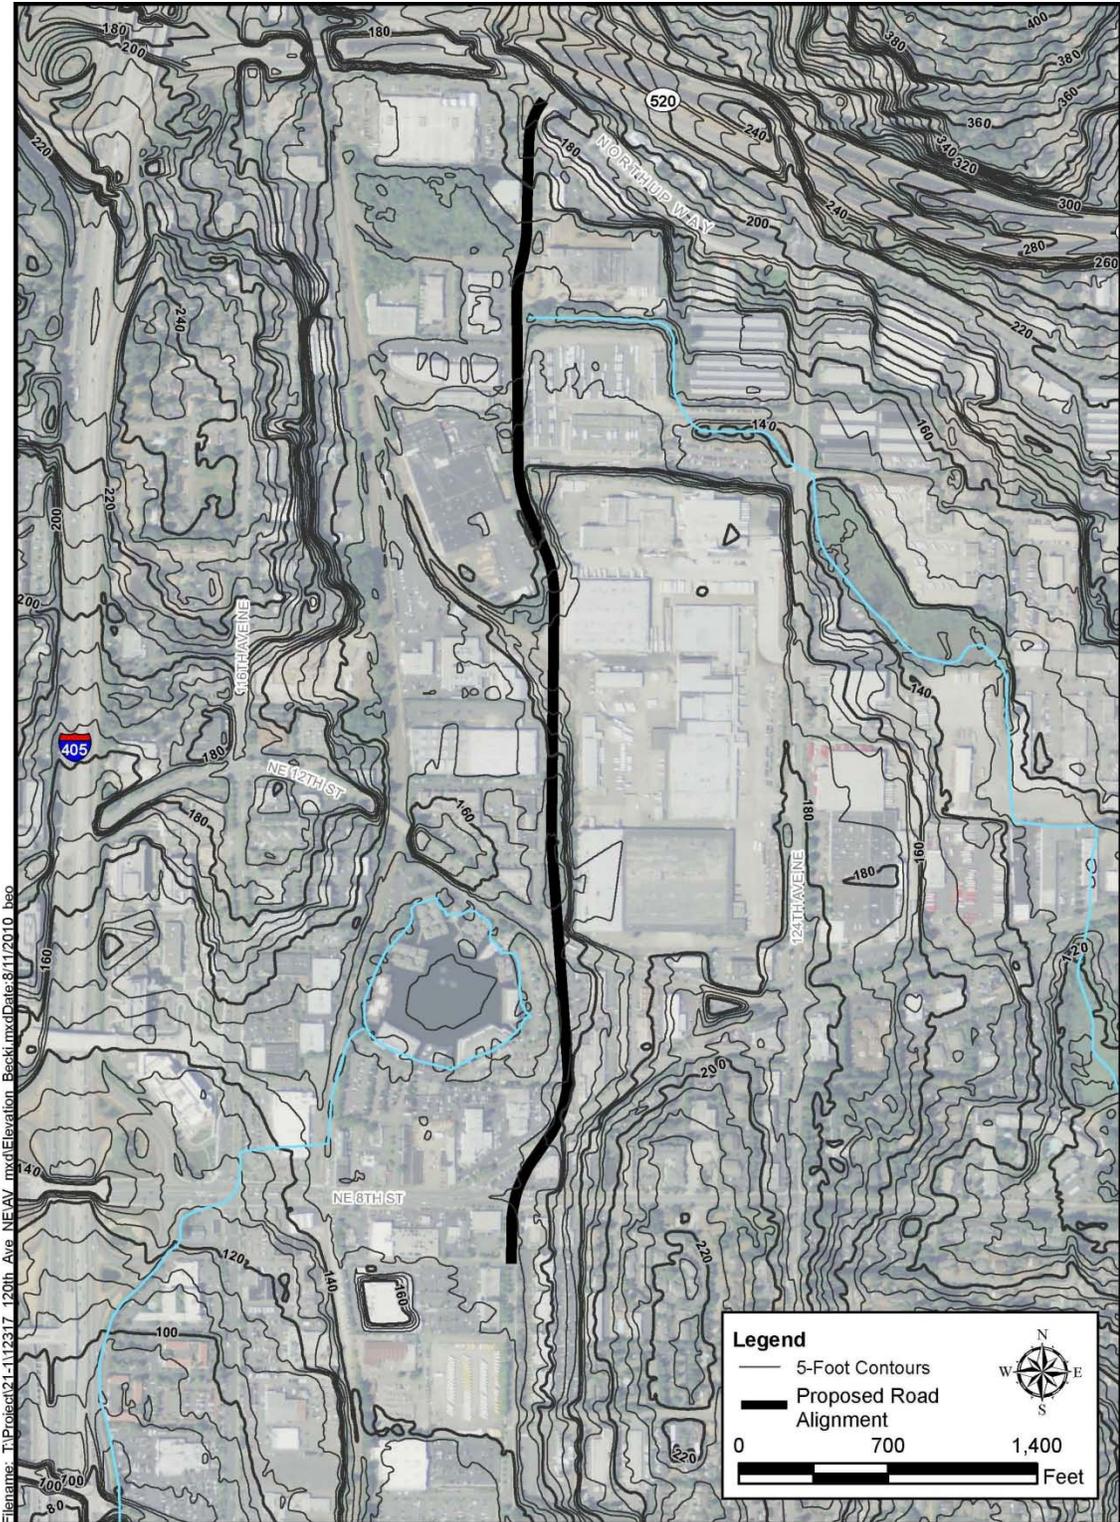

The physical environment of the project area can strongly influence the fate (possible degradation of contaminants) and transport of contaminants released to the environment. Fate and transport of contaminants, in general, are controlled by:

- The mobility of the chemicals;
- The rate of breakdown or degradation of the chemicals in the environment;
- Pathways the chemicals can take to travel from their point of release, such as volatilization to the air or dissolution to water (surface water or groundwater); and
- Whether the transport along those pathways is enhanced or limited by the physical environment.

For example, areas with high permeability soils and shallow groundwater can facilitate contaminant migration (via groundwater) beyond the point of release. In contrast, fine-grained soils tend to impede subsurface contaminant transport.

4.1.1 Topography

The project area is relatively flat (see Figure 4-1). Topographic relief of about 20 feet in localized areas in the north half of the project corridor is the result of filling and/or grading of large, light industrial properties. In the south half of the project corridor and east of 120th Avenue NE, the topography slopes downward toward the west. West of 120th Avenue NE, the ground surface flattens out in the vicinity of Lake Bellevue.

1
2
3

Figure 4-1. Project Area Topography

1 **4.1.2 Geology**

2 The project is located in the central portion of the Puget Lowland, which is an
3 elongated, north-south depression between the Olympic Mountains and the
4 Cascade Range. The Puget Lowland was subjected to six or more major glacial
5 events. Each glaciation deposited new sediment and partially eroded existing
6 deposits. During the most recent glaciation (termed Vashon), glacial ice is
7 estimated to have been about 3,000 feet thick in the project area (Thorson,
8 1989). The weight of the glacial ice resulted in compaction of the underlying
9 soils. The glacially overridden deposits are overlain by recessional glacial
10 deposits that accumulated during retreat of the Vashon ice sheet. The glacial
11 deposits are in turn overlain by younger (Holocene Epoch) sediments deposited
12 principally by streams, lakes, and mass wasting processes.

13 Subsurface conditions in the project area predominantly consist of very dense,
14 Vashon till overlain by loose to dense and soft to stiff, Vashon recessional and
15 Holocene deposits of variable thickness. Vashon till is present at or near the
16 ground surface at the south end of the project area near NE 6th Street, and along
17 much of the central and east portion of the 120th Avenue NE corridor. The
18 deposits typically consist of very dense, gravelly, silt and sand.

19 Vashon recessional outwash deposits overlie till along most of 120th Avenue NE
20 north of approximately NE 8th Street. The deposits range in thickness from a few
21 feet to more than 20 feet thick, and typically consist of medium dense to dense
22 sand and gravel. The outwash deposits are locally interlayered with silt that may
23 represent recessional lacustrine deposits.

24 Holocene peat, lacustrine, and fill deposits locally overlie the Vashon till and
25 recessional deposits. Soft Holocene peat and/or lacustrine deposits are generally
26 concentrated in two areas: (1) the vicinity of Lake Bellevue, and (2) the crossing
27 of 120th Avenue NE with the West Tributary of Kelsey Creek. Artificial fill is
28 widely distributed over the length of the project area and typically consists of
29 loose to dense, sand and gravel. Generally, fill is less than 5 feet thick, but locally
30 reaches thicknesses of more than 20 feet where it was used to replace peat
31 deposits.

32 **4.1.3 Hydrogeology**

33 The regional groundwater flow direction is toward the west-southwest, with
34 localized groundwater discharge points at Lake Bellevue (formerly Lake
35 Sturtevant) and the West Tributary to Kelsey Creek. The West Tributary to
36 Kelsey Creek flows to the southeast, joining Kelsey Creek, and draining into Lake
37 Washington to the west-southwest.

38 Based on our review of boring logs in the area, shallow groundwater (typically 1
39 to 5 feet below ground surface [bgs]) occurs in the Holocene peat deposits found
40 in the vicinity of Lake Bellevue (see Figure 4-2) and the West Tributary to Kelsey
41 Creek. Shallow, perched groundwater is also scattered discontinuously across
42 the corridor in shallow soils and fill (typically 1 to 10 feet bgs).

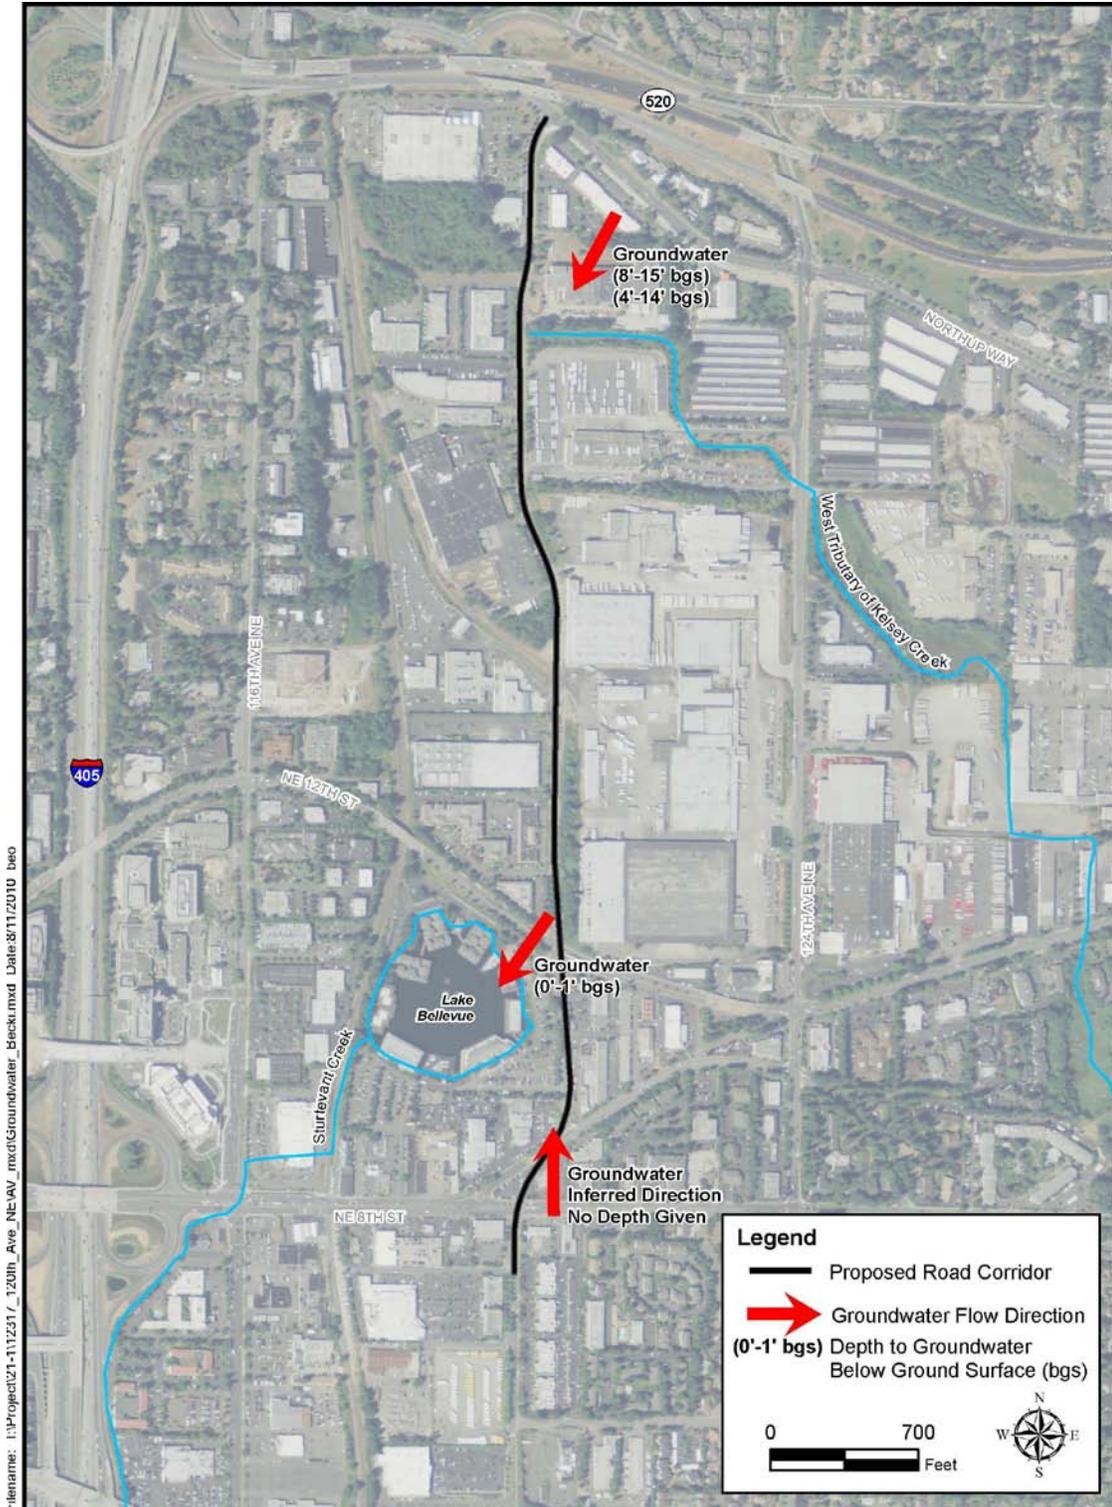

Figure 4-2. Project Area Groundwater

1
2

3
4
5

Perched groundwater is located in the recessional outwash sands that overlie the glacial till soils, with groundwater generally found between 5 and 20 feet bgs. In the Vashon till soils in the area (generally to the east and south), perched

1 groundwater can be found in sand seams located generally between 5 and 20 feet
2 bgs. Locally, groundwater flow in the perched glacial till and recessional outwash
3 deposits may follow topography, which generally directs groundwater to
4 topographic lows along 120th Avenue NE, particularly the intersections of 120th
5 Avenue NE and NE 12th Street and the intersection of 120th Avenue NE near the
6 West Tributary to Kelsey Creek.

7 4.2 Land Use

8 4.2.1 Land Use Overview

9 The first documented land uses of the project area included residential housing
10 and farming as early as 1888. The railroad tracks that cross 120th Avenue NE
11 were present by 1965. During the late 1950s to early 1960s, auto dealerships,
12 gas stations, and other commercial structures started to appear in the project
13 area, primarily in the vicinity of NE 8th Street. Warehouses began to appear
14 along the 120th Avenue NE corridor in the late 1960s to early 1970s. The study
15 area has been dominated by commercial and light industrial land uses since the
16 late 1980s.

17 4.2.2 Businesses that Commonly Use Hazardous Materials

18 Certain business activities, whether presently or formerly occurring on a site, can
19 provide a reasonable basis for assuming that contaminants were used or
20 generated on the site and may have been released. Historic land uses in the
21 project area that may have resulted in soil and/or groundwater contamination
22 include auto repair shops, auto dealerships, dry cleaners, print shops, metal
23 shops, and railroad spurs. Hazardous materials typically associated with these
24 types of businesses include:

25 **Gasoline-range petroleum** contamination generally results from leaks and
26 spills associated with former gasoline stations and vehicle maintenance facilities.
27 Gasoline is relatively mobile in the environment and is more toxic at lower
28 concentrations than heavier grades of hydrocarbons (diesel and oil). Depending
29 on the age of the gasoline release, it can also include benzene, toluene,
30 ethylbenzene, and xylenes (BTEX), methyl tertiary butyl ether and/or lead. These
31 fuel constituents can pose a substantial risk to humans and the environment, are
32 highly soluble and mobile in groundwater, and will float on the water table or
33 perched groundwater.

34 **Diesel- and oil-range petroleum** is used to fuel vehicles and heat businesses
35 and homes. Oil-range petroleum is also often associated with auto repair shops.
36 For the most part, these contaminants are relatively low in toxicity, and are not
37 particularly mobile. Diesel- and oil-range petroleum tends to bind to soil and
38 float on the water table rather than dissolve or disperse throughout the water
39 column. As a result, any given leak or release of diesel or oil is not likely to have
40 resulted in widespread contamination.

1 **Creosote** is a yellowish to greenish-brown oily liquid containing polycyclic
2 aromatic hydrocarbons (PAHs), such as phenols, creosols, and naphthalene.
3 Creosote is derived from coal tar and is commonly used to treat railroad ties,
4 piles, and telephone poles. It can cause severe neurological disturbances if
5 inhaled in high concentrations. Creosote-contaminated soil associated with
6 railroad ties is typically relatively shallow. However, if creosote migrates to
7 groundwater, it is considered relatively mobile because some constituents of
8 creosote are water-soluble.

9 **PAHs**, some of which are carcinogenic, are present in heavy-range petroleum
10 hydrocarbons and are also created during burning as a result of incomplete
11 combustion. They are also present in creosote. PAHs may be associated with
12 petroleum releases such as leaking heating oil USTs and lubricating oils used by
13 railroads. In general, PAHs are relatively insoluble in water and bind to soil
14 particles. Consequently, although some of the compounds are extremely toxic to
15 humans, they are relatively immobile.

16 **Heavy metals**, including arsenic, cadmium, chromium, lead, zinc, and copper, are
17 associated with metal manufacturers, welders, paint manufacturers, printers,
18 wrecking yards, and junkyards. In addition, arsenic has historically been used in
19 herbicides. Metals can become soluble and migrate to groundwater, depending
20 on the chemistry of infiltrating water and/or the media into which the metals
21 were initially released. However, metal contamination is more commonly found
22 in shallow, subsurface soils.

23 **Solvents** such as trichloroethylene and tetrachloroethylene were used
24 historically as solvents in dry cleaning and for degreasing at a variety of
25 businesses such as auto body shops and paint shops/manufacturers. Dry
26 cleaners used large volumes of these solvents. Solvents are highly toxic at low
27 concentrations and are highly mobile in soil and groundwater. Most solvents are
28 denser than water and therefore tend to move downward through the subsurface
29 and water column. Unlike most contaminants, solvents can migrate readily
30 through fine-grained soils.

31 **Polychlorinated Biphenyls (PCBs)** contamination is commonly the result of
32 spills or leaks of dielectric fluids from PCB-containing equipment such as
33 transformers or capacitors, which are often found at power stations, electrical
34 substations, and switchyards. PCBs are persistent in the environment; however,
35 they tend to adhere to organic matter and soil and do not readily migrate from
36 soil to groundwater.

37 **4.3 Sites of Concern**

38 Thirty-six sites of concern were identified adjacent to or near the project
39 corridor. These sites are mapped on Figure 4-3 and area summarized from north
40 to south in Table 4-1. The sites of concern are discussed in more detail after
41 Table 4-1.

42

The **Lowe's (1)** site was formerly occupied by a residence that was heated with oil. The existing Lowe's building was constructed in 1993. This site is listed on the state UST, LUST, and ICR databases. Petroleum contaminated soil associated with a LUST was documented on the site in 1992. In 1995, a final cleanup report was submitted to Ecology and the property was reported as cleaned up. In 1996, one UST was closed in place and two USTs were removed. No other information was given as to whether soil and/or groundwater contamination was encountered during the 1996 tank removal/closure.

The groundwater flow in this portion of the project corridor is likely to the southwest and only clearing and minor grading (1 to 2 feet in depth) is proposed. This site is considered a low risk to the project because it is unlikely that petroleum or solvent contamination would be encountered during project construction.

1 The **Grainger (2)** site was formerly occupied by a residence that was heated with
2 oil. It is not known whether a heating oil spill has occurred on the site or
3 whether the heating oil tank was removed or decommissioned when the existing
4 building and parking lot were constructed.

5 Although 5 feet or more of excavation is anticipated associated with replacing the
6 existing culvert on the southeast corner of this site, the potential for encountering
7 contaminants is considered to pose a low risk to the project because heating oil is
8 relatively low in toxicity and is not particularly mobile in the subsurface
9 environment. Therefore, contamination, if encountered, is not likely to be
10 widespread.

11 **Railroad Tracks (3)** cross the 120th Avenue NE corridor from this site to a
12 bakery facility owned by Safeway. Railroad ties are commonly treated with
13 creosote as a wood preservative. Because creosote contamination, if present, is
14 likely limited to shallow surface soils, this site is considered a low risk to the
15 project.

16 The **Icos (4)** site is listed on the state UST and hazardous waste manifest
17 databases. One UST was removed from this site in 1996. No other information
18 was given on whether soil and/or groundwater contamination was encountered
19 during the 1996 tank removal. Based on the hazardous waste manifest data,
20 halogenated and non-halogenated solvents have been used/stored on this site
21 from 1997 to present.

22 The groundwater flow in this portion of the project corridor is likely to the
23 southwest and limited excavation (approximately 2 feet in depth) is planned on
24 the property. This site is considered a low risk to the project because it is
25 unlikely that petroleum or solvent contamination would be encountered during
26 project construction.

27 The **Pella Windows (5)** site building has historically been heated with oil. In
28 1969, the property was occupied by Sunset Equipment Company. This site is
29 considered a low risk to the project because, based on the projected groundwater
30 flow to the southwest and limited excavation planned in this location
31 (approximately 2 feet in depth), it is unlikely that petroleum contamination
32 would be encountered during project construction.

33 The **Eastside Staple and Nail (6)** site was occupied by Absolute Coatings, a
34 wood finish manufacturer, in 1996. Although solvents and petroleum products
35 are typically used in wood finishing products, it is unlikely that contamination is
36 present in the road right-of-way to be acquired due to the short and relatively
37 recent Absolute Coatings occupancy, and because the building is located more
38 than 50 feet from the right-of-way to be acquired. Limited clearing and grading
39 (1 to 2 feet in depth) is proposed in this location. This property is considered a
40 low risk to the project.

41 The King County **Metro Bus Service Garages (7)** site includes two service
42 garages constructed in 1977. This site is listed on the CSCSL, LUST, UST, ICR, and
43 SPILLS databases. Twenty-three USTs were installed on this property between

1 1964 to 1989. The eight USTs installed in 1989 are still operational. The rest
2 were removed, closed in place, or had a “change of service” in 1996. In 1988, soil
3 and groundwater contamination was encountered associated with a transmission
4 fluid leak. In 1991, diesel-contaminated soil and groundwater were documented.
5 Interim cleanup reports were submitted to Ecology in 1992 and 1996. In 1996,
6 soil and groundwater were confirmed to be contaminated with petroleum
7 products and PAHs. This property is considered a moderate risk to the project
8 because contamination is known to be present and because 5 feet or more of
9 excavation is anticipated along the northwest portion of this property for a
10 retaining wall and culvert replacement.

11 The **International Paper (8)** site building historically was heated with oil. Two
12 USTs associated with a former tenant, Willamette Valley Lumber, were
13 documented in archived tax assessor records. This site is listed on the state
14 LUST, UST, and ICR databases. In 1996, three USTs were removed. Petroleum
15 contaminated soil was encountered during the UST removal. This property was
16 reported as cleaned up in 2002. This site is considered a moderate risk to the
17 project because contamination could still be present beneath the roadway and
18 because 2 to 5 feet of excavation is proposed on the southeast portion of the
19 property.

20 **Railroad Tracks (9 and 10)** cross the 120th Avenue NE corridor from these
21 parcels to the Safeway site. Railroad ties are commonly treated with creosote as
22 a wood preservative. Because creosote contamination, if present, is likely limited
23 to shallow surface soils, this site is considered a low risk to the project.

24 The **Safeway (11)** site includes a truck repair building and a fuel station. This
25 site is listed on the state CSCSL-No Further Action (NFA) and UST databases.
26 Twenty USTs were removed from this site: nine in 1996 four in 2007, and four in
27 2009. One additional exempt UST is present. This site received a “no further
28 action” status from Ecology in 2009. Nevertheless, this property is still
29 considered a moderate risk to the project because (a) it is located topographically
30 up-slope from the 120th Avenue NE corridor; (b) based on the large number of
31 USTs on the property, contamination may exist that has yet to be discovered; and
32 (c) approximately 15 feet or more of excavation is anticipated along this property
33 for a cut wall.

34 Based on aerial photographs, an aboveground storage tank (AST) was located on
35 the **Former Safeway Aboveground Tank (12)** site from at least 1990 to 2007.
36 The tank was located approximately 75 feet from the 120th Avenue NE roadway.
37 The type of material that was stored in the aboveground tank is not known. This
38 property is considered a low risk to the project because although an aboveground
39 tank that may have been used to store bulk petroleum was located on this
40 property, only limited clearing and grading (1 to 2 feet) is proposed along this
41 site.

42 The **Former Safeway Maintenance Shop (13)** site includes four large
43 warehouses, an office building, a recycling center, and a maintenance shop.

1 Safeway owned this property until 2007, when the property was sold to WR-SRI
2 120th LLC. The site is listed on the state ICR and SPILLS database. Petroleum
3 contaminated soil was identified and cleaned up in 1993. Small diesel spills (2 to
4 10 gallons) were documented in 2003, 2004, and 2007. This property is
5 considered a moderate risk to the project because some of the USTs and
6 associated contamination on the Safeway property may be located on the Former
7 Safeway Maintenance Shop site and because groundwater may be encountered
8 during the 2 to 4 feet of excavation for proposed ground improvements along the
9 western boundary of this site.

10 The **Barrier Audi (14)** site is listed on the state CSCSL, LUST, UST, VCP, and ICR
11 databases. Petroleum contaminated soil was documented in 1996 when three
12 USTs were removed from the site. The site was listed as cleaned up in 1996.
13 However, groundwater was confirmed to be contaminated with petroleum
14 products in 2008, and a remedial assessment is in progress. This property is
15 considered a low risk to the project because the likely location of the service
16 garage is at the west end of the site building (at least 300 feet away) and because
17 limited clearing and grading (1 to 2 feet) is anticipated along this property.

18 The **K & L Distributors (15)** site is listed on the state CSCSL-NFA, UST, ICR, and
19 VCP databases. Petroleum-contaminated soil and groundwater was identified in
20 1998. A final cleanup report was submitted in 1998 and a “no further action”
21 status was obtained from Ecology. Two USTs that were installed on the property
22 in 1981 were removed in 2008. No other information was given as to whether
23 soil and/or groundwater contamination was encountered during the 2008 tank
24 removal/closure. This property is considered a low risk because limited
25 excavation (2 feet in depth) is anticipated on this property for a retaining wall.

26 The **Former Printing Company (16)** site was historically occupied by Graphic
27 Advertising Services (1985), Newsletters Inc. (1990-91) and Crown Printing
28 (1990-91). These businesses typically use metals and solvents during their
29 printing operations; however, printing/graphics companies occupied the site for
30 a relatively short time. Groundwater is likely relatively shallow in this area and
31 dewatering may be required associated with the approximately 5 feet of
32 excavation proposed along the eastern edge of the property. This property is
33 considered a moderate risk to the project.

34 The **Former Printing Company/Auto Repair Shop (17)** site was historically
35 occupied by several printing, photography, and gold and silver plating businesses
36 between 1985 and 2000. Each business was only listed for one year in the city
37 directories reviewed. An engraving business occupied the site from 1990 to
38 2000, and up to seven auto repair shops and two auto parts companies occupied
39 the site between 1980 and 2000. Based on these site uses, metals, solvents, and
40 petroleum products were likely used and stored on the site. The site is listed on
41 the federal PCB activity database system (PADS) database. Although this site is
42 not listed on a state or federal database that would indicate that contamination is
43 present, the site is considered a moderate risk due to the variety of contaminants
44 that were likely used/stored on the property and because 10 to 15 feet of

1 excavation is anticipated along the western boundary of this property for a cut
2 wall.

3 The **Barrier Porsche (18)** site building was constructed in 1969, and was
4 historically heated with oil. The building was occupied by a bakery until 1996.
5 The building was remodeled as a car showroom in 2003. The building includes a
6 service garage. It is unknown whether the heating oil UST has been removed
7 and/or if a heating oil spill has occurred on the site. This property is considered
8 a moderate risk to the project because of the historical and current use of
9 petroleum products on the site, 10 to 15 feet of excavation is anticipated along
10 the western boundary of this property for a cut wall, and the City anticipates
11 acquiring this property.

12 The **Accutint (19)** site has been occupied by up to three auto repair shops since
13 1969. The site was occupied by a machine shop in 1980 and an ornamental iron
14 shop in 1969. Petroleum products and metals were likely used and stored on this
15 site. The site is considered a low risk to the project because it is not adjacent to
16 the 120th Avenue NE corridor, no excavation is proposed on the site, and it is not
17 listed on a state or federal database that would indicate that contamination is
18 present.

19 The **Midas Auto Repair (20)** site has been occupied by up to three auto repair
20 shops since 1969. Petroleum products were likely used and stored on this site.
21 The site is considered a low risk to the project because it is not adjacent to the
22 120th Avenue NE corridor, no excavation is proposed on the site, and it is not
23 listed on a state or federal database that would indicate that contamination is
24 present.

25 The **Barrier Mercedes (21)** site includes a service garage. This site is listed on
26 the state LUST, UST, and ICR databases. Soil contamination associated with a
27 LUST was documented in 1994. Cleanup was started in 1994 and reported
28 cleaned up in 1995. In 1996, two USTs were removed and an interim cleanup
29 report was submitted to Ecology. This property is considered a moderate risk to
30 the project because contamination is known to exist on the property and because
31 groundwater may be encountered during the 2 to 4 feet of excavation proposed
32 along the eastern portion of the property for a retaining wall.

33 The **Barrier Volvo (22)** site is occupied by a car showroom and service garage.
34 The site is not listed on a state or federal database that would indicate that
35 contamination is present. The site is considered a low risk to the project because
36 petroleum products are used and stored on the site but no excavation is
37 proposed on this property.

38 The **Former Texaco Gas Station (23)** site was occupied by a gas station from at
39 least 1959 to 1970. This site is listed on the state CSCSL, LUST, UST, and ICR
40 databases. Three USTs, reportedly installed in 1989/1990, are still operational.
41 Soil and groundwater contamination were identified on this site in 1990. Interim
42 cleanup reports were received by Ecology for this site during 1991 to 1994. Five
43 USTs reportedly were removed in 1996. It is unlikely that contamination has

1 spread from this site to the project corridor because it is located over 300 feet
2 from the proposed 120th Avenue NE corridor. The site is considered a low risk
3 to the project.

4 The **Office Building (24)** site was formerly occupied by a residence that was
5 heated with oil. No other land uses of concern were noted and no excavation is
6 proposed on this property. This site is considered a low risk to the project.

7 The **Former Priority Publishers (25)** site was occupied by a printing company
8 in 1985. Although solvents and metals are typically used in printing operations,
9 it is unlikely that widespread contamination occurred due to the short occupancy
10 of the site by a printing company. No excavation is proposed for this site. The
11 site is considered a low risk to the project.

12 The **Former Bakker's Fine Dry Cleaning Plant (26)** building was originally
13 occupied by a dry cleaning facility from 1959 until at least 2005, and is currently
14 used as a Barrier Mercedes Benz showroom. Based on GeoEngineers' summary
15 of Ecology files reviewed for the 120th Avenue Improvement Project
16 (GeoEngineers, 1994) and our Ecology file review for this site, four USTs were
17 removed from the site in 1989. The USTs reportedly were used to store Stoddard
18 solvent, diesel fuel, distillates, and solvents. The USTs were excavated from two
19 adjoining locations immediately northeast of the existing building. An Ecology
20 representative was on site during the tank removal.

21 "Minor" groundwater seepage was reported at a depth of approximately 8 feet
22 below ground surface. Discoloration or iridescent sheens were noticed in soil
23 and groundwater near the distillate tank and solvent tank excavation, and a
24 petroleum odor was also detected. It was reported that a 4-inch tile drain, which
25 was connected to two floor drains inside the building and drained to the
26 Stoddard solvent tank, was leaking into the soil in the area of the tanks.
27 According to an interview with the operator of the facility, occasional "accidental"
28 spills occurred during cleanup that discharged Stoddard solvent directly into the
29 building floor drains. The tile drain was reportedly replaced with plastic drain
30 line.

31 Soil samples were obtained from the four sides of each of the two excavations
32 and the bottom of each excavation. Soil samples were analyzed for total
33 petroleum hydrocarbons. Only one sample, taken from the bottom of one of the
34 excavations, was analyzed for chlorinated organic compounds. Soil samples were
35 below the regulatory cleanup levels for diesel-range petroleum hydrocarbons
36 and non-detect for the one soil sample analyzed for chlorinated organic
37 compounds. Because the water in the excavation was reportedly from the
38 leaking drain tile and was reportedly removed with the excavated soil, no
39 groundwater samples were analyzed.

40 An additional UST was reportedly installed in 1989 to store Stoddard solvent.
41 Based on maps in the Ecology file, it appears that the UST was installed in the
42 location of the former USTs. The 1989 UST was removed in 1999. At this time,
43 three soil samples reportedly were taken on the east, west, and south walls of the

1 excavation and analyzed for petroleum hydrocarbons. Laboratory test results
2 reportedly indicated that the soil samples were below regulatory cleanup levels
3 for petroleum.

4 Solvent spills associated with poor housekeeping practices were reported for this
5 property, and only limited soil sampling and no groundwater sampling was
6 conducted on this site. This site is considered a high risk due to the relatively
7 high expense of remediating solvent contamination and because the City may
8 acquire this site.

9 The **Former Dry Cleaner Office Building (27)** site is located between a former
10 dry cleaning plant and a former gas station. The site building was constructed as
11 a bank in 1961 and later used as an office building for the dry cleaning plant
12 located on the adjacent property to the east. No dry cleaning operations were
13 documented for this site. However, the dry cleaning plant had documented
14 practices of dumping solvents down floor drains, and an underground drain pipe
15 discharging solvent-contaminated water was identified on this property during
16 investigations on the adjacent gas/service station to the west. This property is
17 considered a moderate risk to the project because it was associated with a
18 contamination source property, it has known contamination exiting the western
19 property boundary, and because the City may acquire this site.

20 The **Former Gas/Service Station (28)** site was occupied by a gasoline station
21 from 1956 to at least 1975. Based on the site photo from archived assessor
22 records, it appears that the gasoline USTs and tanks were located west of the
23 former site building.

24 This site is identified on the state LUST, UST, and ICR databases as Avis Rent-A-
25 Car. Petroleum-contaminated soil and groundwater were encountered in 1989
26 during the removal of a waste oil UST and a gasoline UST south of the site
27 building. Approximately 19 tons of contaminated soil was excavated and
28 disposed of offsite. Petroleum- and benzene-contaminated soil was left in place
29 beneath the building and petroleum-contaminated soil was left in place beneath
30 utilities east of the waste oil UST excavation.

31 Based on a report titled Groundwater Monitoring and Investigation and Cleanup
32 of Petroleum Contaminated Soils that was prepared by Petroleum Services
33 Unlimited (Pacific Northern Environmental Corporation [PNEC], 1991), a Phase II
34 environmental site investigation was conducted on the property in 1991. The
35 Phase II report was not available for review at Ecology. The PNEC report
36 included the following information:

- 37 • Diesel-contaminated soil was identified north of the site building.
38 Contamination was inferred to the result of a former UST in this location.
39 Contaminated soil was removed from this area except along the north wall
40 of the building due to the potential for structural damage. Petroleum-
41 contaminated soil was also left along the northern extent of the
42 excavation, where contamination was reportedly below regulatory
43 cleanup levels.

- Groundwater on the north portion of the site was confirmed to contain gasoline and BTEX volatile organic compounds. Monitoring well samples taken five months after initial discovery reportedly contained gasoline and mineral spirits contamination above regulatory cleanup levels in one well (MW3, located directly north of the site building). The mineral spirits contamination was concluded to have migrated onto the site from the adjoining dry cleaning site to the east.
- Benzene contamination was identified above cleanup levels in monitoring well MW6, located north of MW1 and adjacent to NE Bellevue-Redmond Road.
- A 16-inch concrete sewer pipe was discovered along the eastern boundary of the site. Excavation of this pipe led to the discovery of a 4-inch concrete pipe originating on the Bakker's Fine Dry Cleaning site that was connected to the 16-inch pipe. Water was reportedly discharging from the 4-inch pipe onto the Former Gas/Service Station site. Water collected from this pipe had concentrations of trichloroethylene at 11 parts per billion (ppb) and tetrachloroethylene at 1,600 ppb, which are both above regulatory cleanup levels.
- Based on the discovery of the leaking pipe from the dry cleaner property, groundwater samples from three monitoring wells were analyzed for chlorinated organic compounds. MW3 contained levels of trichloroethylene and tetrachloroethylene above regulatory cleanup levels.
- Monitoring well sampling appeared to be limited to three monitoring wells north of the site building. One monitoring well was installed west of the site building. Based on the site map in the report, it appears that this monitoring well was located between the site building and the former gas station pumps and USTs; however, no investigation of this area was documented.
- Based on Figure 6 in the report, a new UST and gas pump had been installed south of the site building prior to 1991.

Based on the UST database information, one UST was removed in 1996 and a second UST was "temporarily closed in place" in 2003. Based on current assessor records, the site building was demolished in 1999.

This site is considered a high risk to the project because (a) known gasoline- and diesel- range petroleum, benzene, mineral spirits, and chlorinated solvent contamination is present and may be migrating off-site; (b) the former gasoline USTs may still be present on site; and (c) the City may acquire this property.

The **Former VIP Cleaners (29)** site was occupied by a dry cleaners in 1985. Based on its short occupancy of the site, the dry cleaners was likely a drop-off location and not a dry cleaning plant. Based on the short occupancy of the site by a dry cleaners, it is considered unlikely that widespread solvent contamination has occurred. This property is not located adjacent to the 120th Avenue NE corridor. This property is considered a low risk to the project.

1 The **Shell Gas Station (30)** site has been occupied by a gas station since 1972.
2 The site is listed on the state CSCSL, LUST, UST, and VCP databases. Three USTs
3 were installed in 1990 and are still operational. Petroleum-contaminated soil
4 and groundwater was encountered during the tank installation, likely due to
5 leaks associated with older USTs. Based on GeoEngineers' summary of Ecology
6 files reviewed for the 120th Avenue Improvement Project (GeoEngineers, 1994),
7 contaminated soil was left in place where it extended beyond the western
8 property line of the site. A vapor extraction system reportedly was installed
9 along the western property boundary in 1991. Five USTs were removed in 1996.
10 Based on the CSCSL database information, soil and groundwater were confirmed
11 as contaminated with petroleum products in 2009.

12 This site is upslope from the project. Contamination is known to be present on
13 the site and may be present in the 120th Avenue NE corridor. Because 3 feet of
14 excavation is proposed for a cut slope or retaining wall on the west side of this
15 site, the site is considered a moderate risk to the project.

16 The **Lamps Plus (31)** site was formerly occupied by a transmission repair shop
17 and tire shop (1969) and an auto sales business (1985 and 1990-91). Based on
18 GeoEngineers' summary of Ecology files reviewed for the 120th Avenue
19 Improvement Project (GeoEngineers, 1994), petroleum-contaminated soil was
20 encountered on the site in 1992. No cleanup activities have been recorded for
21 this site; however, the existing building was constructed on the property in 1994.
22 This property is considered a low risk to the project because soil contamination
23 was likely addressed during site redevelopment and only limited clearing and
24 grading (1 to 2 feet in depth) is proposed on this site.

25 The **Tiki Car Wash (32)** site has been occupied by a gas station since 1971. This
26 site is listed on the state CSCSL, LUST, UST, and HSL databases. The three USTs
27 that were installed on the site in the 1970's are still operational. Petroleum-
28 contaminated soil and groundwater were documented on this site in 1989 and
29 1995. In 1991, soil and groundwater were also documented as being
30 contaminated with non-halogenated solvents.

31 This site is located approximately 160 feet west of the 120th Avenue NE corridor
32 and is separated from the corridor by the Lamps Plus property. The Tiki Car
33 Wash site is considered a low risk to the project because no earthwork is
34 proposed on the site, and only minor clearing and grading (1 to 2 feet in depth), is
35 proposed along the east boundary of the adjoining Lamps Plus property,

36 The **Dollar Rent-A-Car (33)** site was historically occupied by a gas station and
37 used car sales lot. Based on a draft hazardous materials discipline report for the
38 NE 4th Street Extension project (Shannon & Wilson, 2010), the site was also
39 historically occupied by a bulk heating oil distributor. Petroleum-contaminated
40 soil and groundwater were encountered in 1989 when four USTs were
41 reportedly removed. The property was reported as cleaned up 1995. In 1996,
42 four additional USTs were reportedly removed. No other information was given

1 as to whether soil and/or groundwater contamination was encountered during
2 the 1996 tank removal/closure.

3 Because this site is located 280 feet west of the 120th Avenue NE corridor, it is
4 unlikely that petroleum contamination has migrated from this site to areas where
5 excavation is proposed. Nearby areas of excavation are limited to 3 feet in depth.
6 This site is considered a low risk to the project.

7 The **Former Care Computer Systems (34)** site was formerly occupied by a
8 residence that was heated with oil. No other land uses of concern were noted.
9 Approximately 3 feet of excavation is proposed along the western property
10 boundary for a cut slope or retaining wall. Heating oil is relatively low in toxicity
11 and is not particularly mobile in the subsurface environment. Contamination, if
12 encountered, is not likely to be widespread. This site is considered a low risk to
13 the project.

14 The **High Tech Cleaners (35)** site has been occupied by a dry cleaners since at
15 least 2000. This property is listed on the state LUST, UST, and ICR databases. In
16 2002, soil and groundwater were confirmed to be contaminated with
17 halogenated solvents. Based on a draft hazardous materials discipline report for
18 the NE 4th Street Extension project (Shannon & Wilson, 2010), approximately 19
19 cubic yards of solvent-contaminated soil was excavated from beneath the dry
20 cleaning building and disposed of offsite as a dangerous waste. Confirmation
21 samples confirmed that the removal of tetrachloroethylene-impacted soils has
22 been accomplished. It does not appear that potential groundwater
23 contamination has been addressed. This site is considered a low risk to the
24 project because contaminated soil reportedly has been remediated and limited
25 earthwork (1 to 2 feet in depth) is proposed adjacent to this property.

26 The **Bellevue School Vehicle Maintenance (36)** site is used as a vehicle
27 maintenance yard. The site is listed on the state UST database. Five USTs were
28 removed from the site in 1996. No other information was given on whether soil
29 and/or groundwater contamination was encountered during the tank removal
30 activities. Based on a 2007 aerial photograph, it appears that site USTs are likely
31 located on the western portion of the property, approximately 300 feet west of
32 the 120th Avenue NE corridor. This site is considered a low risk because
33 petroleum contamination, if present, is unlikely to have migrated to the 120th
34 Avenue NE corridor and only minor clearing and grading (1 to 2 feet in depth) is
35 proposed along this property.

36 4.4 Complexity of Hazardous Materials Cleanup

37 The WSDOT Guidance & Standard Methodology for WSDOT Hazardous Material
38 Discipline Reports (June 2009) recommends discussing whether the complexity
39 of mitigation on a site would be straightforward or complicated. These terms are
40 defined by WSDOT as:

- 41 • **Straightforward:** Sites determined to be straightforward are typically
42 small to medium in size and the potential contaminants are not extremely

1 toxic or difficult to treat. Examples of straightforward sites are gas
2 stations, auto repair shops, most USTs, ASTs, buildings with asbestos or
3 materials that contain lead-based paint.

- 4 • **Complicated:** Sites determined to be complicated consist of sites with
5 widespread contamination or potential contaminants are difficult to treat.
6 Complicated sites will typically involve additional research, investigation,
7 and possibly regulatory involvement. Examples of complicated sites are
8 dry cleaners, wood treating operations, metal plating facilities, or other
9 operations that use or used large amounts of hazardous materials.

10 To expand the roadway, the City will acquire strips of land from most adjacent
11 properties, including several of the sites of concern. These strips of land have
12 been typically used as sidewalks, landscaped areas, and parking lots.
13 Contamination present on these strips of land would presumably be present due
14 to a release on the main portion of the property that has migrated toward the
15 roadway. The complexity of cleanup will be relatively straightforward for these
16 strips of land because cleanup will be limited to disposal of excavated materials.

17 Four properties, the Barrier Porsche site, the Former Bakker's Fine Dry Cleaning
18 Plant site, the Former Dry Cleaner Office Building site, and the Former
19 Gas/Service Station site, may be fully acquired by the City to extend 120th
20 Avenue NE from NE Bellevue-Redmond Road to NE 8th Street. For these sites,
21 the City may be liable under MTCA for cleanup of contamination generated on
22 these sites, including remediation of nearby properties where contamination has
23 migrated from the acquired sites.

24 For the Barrier Porsche site, contamination is likely limited to petroleum
25 hydrocarbons released by the site auto repair shop and/or from the former
26 heating oil UST. Remediation of this site would likely be relatively
27 straightforward.

28 Because soil and groundwater on the three remaining sites is known to be
29 contaminated with petroleum, benzene, and solvents; and previous site
30 investigations suggest that contamination may extend off-site; remediation for
31 these properties is considered complicated.

32

5.0

Environmental Effects

Hazardous materials could affect the project during construction and operation of the proposed roadway. The following sections describe possible direct, indirect, and cumulative effects of the proposed project. No discussion of the environmental effects of a no-build alternative is included. Recommended further investigations and mitigation measures are summarized after the effects sections.

5.1 Direct Effects on Hazardous Materials

Direct effects are caused by the action and occur at the same time and place as the project. For example, hazardous materials may be encountered or generated directly due to the construction or operation of the 120th Avenue NE roadway corridor.

5.1.1 Effects During Construction

Potential Soil and Groundwater Contamination

Proposed construction activities include cut slopes, retaining walls, over-excavating unsuitable soils, and a culvert replacement. Contaminated soil may be encountered during excavation associated with these project components.

Shallow groundwater (0 to 5 feet bgs) is anticipated in the vicinities of Lake Bellevue and the West Tributary to Kelsey Creek. Perched groundwater (5 to 20 feet bgs) may be encountered along the remainder of the corridor. Therefore, contaminated groundwater may be encountered during excavation activities.

Spills of hazardous materials used in construction, such as fuels, lubricants, and hydraulic fluids, can occur during construction and introduce contaminants to the environment. Chemicals that can be released from uncured asphalt used for road surfacing also can be toxic. Use of these and other construction materials presents some risk to the environment.

Health and Safety Concerns

Workers would be at risk from exposure to hazardous materials and waste encountered or generated during construction because of the duration of their potential exposure and proximity to areas where such materials may be encountered or used. The primary means of exposure would be inhalation of dusts or vapors containing hazardous substances generated during excavation in areas with contaminated soils.

Encountering unanticipated contamination could expose workers to potentially toxic concentrations and could create other hazardous situations, such as explosive environments. Air quality could be affected, with associated health concerns as a result of disturbing volatile substances during construction.

1 Minor spills of materials used in construction, such as fuels, lubricants, and
2 hydraulic fluids, can occur during construction operations. Exposure to such
3 accidental releases could damage skin, eyes, lungs, and other organs. Unless a
4 spill is a major event, it is not likely to present significant risk to human health.
5 Chemicals potentially released from uncured asphalts in road surfacing also
6 present some exposure risk. All workers have a legal right to know about
7 potential hazardous conditions in the workplace and should be trained in hazard
8 recognition, as well as how to respond to and report such conditions.

9 Public health risk could also arise as a result of accidental release or diversion of
10 contaminants to environmentally sensitive areas, such as surface waters,
11 groundwater, public drinking water systems, or public air spaces. Releases to
12 such areas could provide direct or indirect pathways of contaminant exposure to
13 the general public.

14 Issues related to health and safety issues discussed here are specific to potential
15 exposure to hazardous materials encountered or generated during construction
16 activities. Physical hazards of construction activities are not addressed.

17 **5.1.2 Effects During Operation**

18 Effects of hazardous materials from normal operations of the roadway are
19 primarily associated with runoff of contaminants entrained in stormwater.
20 Contaminants likely to be in stormwater runoff include petroleum-based fuel and
21 lubricants, compounds from tires, and automobile engine coolants such as
22 ethylene glycol. Stormwater runoff currently is not contained or treated.
23 Stormwater and water quality treatment facilities would be designed to collect
24 and retain pollutants from traffic operations.

25 Other operation effects include potential pesticide use as part of a vegetation
26 management program and potential catastrophic spills of hazardous materials
27 resulting from vehicle accidents.

28 **5.2 Indirect Effects on Hazardous Materials**

29 Indirect effects are associated with a project and occur later in time or farther
30 removed in distance; but they are still reasonably foreseeable (e.g., induced land
31 development from highway projects). Potential indirect effects associated with
32 the project include:

- 33 • Contamination may be discovered and addressed by the project or
34 subsequent development along the corridor that otherwise would have
35 remained in place or potentially migrated.
- 36 • Contamination may be cleaned up faster to accommodate project
37 construction.
- 38 • Contamination may be prevented by removing potential hazardous
39 material release sources, such as USTs, before a release occurs.
- 40 • Contaminated materials may be uncovered, allowing more direct exposure
41 to the public.

- Contamination may be spread as a result of construction (for example, a new utility corridor could provide a new conduit for contamination to spread through).

5.3 Cumulative Effects on Hazardous Materials

Cumulative effects result from the incremental effects of the action when added to other past, present, and reasonably foreseeable actions, regardless of the agency or person initiating the other actions. At this time, reasonably foreseeable projects in the area include:

- Spring District: Wright Runstad & Company, in joint venture with Shorenstein Properties, LLC has planned the development of the Spring District, a 36-acre mixed-use urban neighborhood within the Bel-Red Corridor. The Spring District will consist of up to 1,000 multi-family residences, over 3 million square feet of office space and several high-density buildings that will provide retail services. The proposed development will be located at the northeast corner of 120th Avenue NE and NE 12th Street.
- Sound Transit's East Link Project: This project will consist of an electric light rail train system that will connect areas between Seattle and Overlake Transit Center in Redmond. It is anticipated that the system will have a station just east of the intersection of 120th Avenue NE and NE15th/16th Street, located in the Spring District development. This project is expected to be completed between 2016 to 2021.
- Construction of the light rail will result in the acquisition of property at 1445 120th Avenue NE. Since not all of the property will be used for the light rail track, some portion of it will be redeveloped. As this is already a commercial property, the nature of the land use is unlikely to change significantly.
- NE 15th/NE16th Streets/124th Avenue NE: In concert with East Link light rail project, NE 15th Street/NE 16th Street will be constructed through to 124th Avenue NE, which will be widened to 5 lanes. The anticipated traffic flow pattern from downtown to eastbound State Route (SR) 520 is: NE 4th Street to 120th Avenue NE to NE 15th/NE 16th Street to 124th Avenue NE to SR 520.

No adverse cumulative effects on hazardous materials are anticipated. A positive cumulative effect would be that less contamination would exist in the study area if cleanup activities are conducted associated with the Bellevue 120th Avenue NE Corridor project or one of the projects above.

5.4 Recommendations for Further Investigations

Further investigation is recommended for this project. We recommend that Ecology files be reviewed for the moderate risk sites that are listed on the state

1 LUST, CSCSL, VCP, and ICR databases to better evaluate whether contamination
2 has migrated into the 120th Avenue NE corridor. Based on the file review
3 findings, some moderate risk sites may be downgraded to a low risk.

4 A limited Phase II environmental site assessment is also recommended after the
5 Ecology file review and reassessment of moderate risk sites have been
6 conducted. The Phase II would include soil and groundwater sampling on the
7 moderate and high risk sites of concern that may be acquired for the project. On
8 the moderate risk sites where only a strip of land will be acquired, sampling
9 should be conducted at regular intervals where excavation is proposed (i.e.,
10 retaining walls, foundations, and cut slopes). Sampling should be conducted to
11 the maximum depth of excavation/proposed structure. On the high and
12 moderate risk sites that the City may acquire, soil and groundwater sampling
13 should be conducted on and off site to determine the concentrations and extents
14 of contamination on these sites and to determine whether contamination has
15 migrated to adjacent properties. Based on this knowledge, the City may be able
16 to negotiate cleanup responsibilities and costs with the existing owners prior to
17 property purchase.

18 Construction monitoring is recommended in the 120th Avenue NE right-of-way
19 where clearing and grading is proposed on all sites of concern that are adjacent
20 to the right-of-way. In accordance with the WSDOT Standard Specifications, the
21 City or the general contractor will complete a spill prevention control and
22 counter measures plan for dealing with hazardous materials.

23 **5.5 Mitigation Measures**

24 **5.5.1 Avoidance of Contamination**

25 During preliminary engineering, the design team discussed whether the project
26 could be constructed without purchasing the Former Bakker's Fine Dry Cleaning
27 Plant, Former Gas Pump/Tanks, and Former Gas/Service Station properties. The
28 design team concluded that acquisition of these properties likely will be required
29 for the project; however, the design team will continue to explore whether
30 acquisition of one or more of these properties can be avoided.

31 Where avoidance of contaminated soils and/or groundwater is not feasible,
32 several construction methods could be used to reduce the amount of potentially
33 contaminated soil and/or groundwater is encountered. For example, it may be
34 possible to surcharge peat soils in some locations rather than excavating the peat.
35 If surcharging is not practical, stone columns or piles may be used to structurally
36 support fill material placed over the peat.

37 **5.5.2 Construction Planning**

38 Several mitigation measures will be required as part of construction planning.
39 These include:

- 40 • The construction plans will include procedures, including best
41 management practices, which will be employed for construction of the

1 project. The plans will include direction for: spill prevention, control, and
2 countermeasure plans, temporary erosion and sedimentation control
3 plans, and plans for handling and disposal of known and unanticipated
4 contamination.

- 5 • To ensure the use of appropriate procedures on monitoring, a site-specific
6 Health and Safety Plan describing monitoring requirements and the use of
7 personal protective equipment will be necessary.
- 8 • Because contaminated soil is likely to be encountered, a stockpile area
9 should be designated for temporary storage of soils awaiting
10 characterization results.
- 11 • If further soil investigations indicate that soils encountered during project
12 construction are anticipated to be a dangerous waste, assignment of an
13 identification (ID) number, along with planning for soil handling and
14 disposal should be completed prior to construction. This would reduce
15 soil handling time, as soils can be loaded onto trucks during initial
16 excavation and hauled to treatment or disposal facilities.

17 Although many of the known and potentially contaminated sites that could affect
18 the project have been identified, the possibility of encountering unknown
19 contamination cannot be discounted. The WSDOT Construction Manual and
20 WSDOT Environmental Procedures Manual provide guidelines for addressing
21 discoveries of unanticipated contamination.

22 It is necessary to ensure that there are individuals on site who are trained in
23 recognizing potential contamination and reporting procedures. Failure to
24 recognize such hazards can lead to spills or injury, with the associated response
25 and health implications.

26 **5.5.3 Disposal Options for Contamination**

27 Contamination may not be avoidable in some areas of the 120th Avenue NE
28 corridor where earthwork is anticipated. If contamination is encountered during
29 project construction, mitigation measures will be taken to handle the
30 contaminated materials. Possible mitigation measures include:

- 31 • Adjusting construction methods to minimize the volume of contaminated
32 soil and/or groundwater encountered.
- 33 • Properly managing and disposing of contaminated soil and/or
34 groundwater encountered.

35 If soil contamination is encountered during construction, excavated soil will
36 require stockpiling and testing to determine its regulatory classification and the
37 most cost-effective management strategies. Concentrations of hazardous
38 materials should be evaluated relative to MTCA Method A cleanup standards to
39 assess whether the soils would be of concern. MTCA Method A or B cleanup
40 levels could be used to determine disposal strategies where small amounts of
41 contaminated soils are present, where soils need to be removed and disposed of
42 quickly, and where soils can be easily used as subgrade road material.

1 Soils failing the Toxicity Characteristic Leaching Procedure (TCLP) or exceeding
2 other dangerous waste criteria would need to be handled as Washington State
3 dangerous waste.

4 Some specific options to mitigate for encountered contamination are listed
5 below:

6 **Petroleum**

7 Petroleum-contaminated soil and groundwater associated with gasoline stations,
8 auto repair shops, and heating oil tanks will likely be encountered during project
9 construction. Mitigation options for petroleum contamination differ depending
10 on the media contaminated. Mitigation options for petroleum contaminated soil
11 and groundwater are discussed below.

12 **Soil**

13 Petroleum-contaminated soils will be evaluated relative to current MTCA Method
14 A cleanup levels or to Ecology's risk-based total petroleum hydrocarbon criteria.
15 Method A cleanup levels are conservative and are not risk based. Soil cleanup
16 actions using Method A cleanup levels would likely result in more soil having to
17 be remediated than would be required under a risk-based cleanup. Method A
18 would be easier to implement, and would allow for more rapid determination of
19 remediation requirements than would be realized using the risk-based
20 evaluation. Use of the risk-based approach, however, would result in more
21 flexible cleanup levels and would allow more petroleum-contaminated soil to
22 remain on site or to be used as road fill material in the project area.

23 Soil contamination encountered during construction will require stockpiling and
24 testing to assess the regulatory classification of the soil and the most cost-
25 effective remediation strategy. Options for reusing and disposing of petroleum-
26 contaminated soils, not in prioritized order, include the following:

- 27 • Soils containing petroleum contamination at concentrations below MCTA
28 Method A cleanup levels are not restricted in use and could be used
29 similarly to non-contaminated soils.
- 30 • Soils containing petroleum contamination at concentrations above MCTA
31 Method A cleanup levels but below site-specific risk-based contaminant
32 concentrations could be placed under roadways if adequate fill capacity
33 exists and the soils meet geotechnical fill requirements.
- 34 • Petroleum hydrocarbons-contaminated soils that exceed risk-based
35 contaminant concentrations, or soil in excess of the quantity required for
36 fill, could be transported to a thermal treatment facility. Alternatively, the
37 soil could be disposed at a landfill permitted to accept such contaminated
38 soils.

39 **Groundwater**

40 Where contaminated groundwater is generated during construction,
41 containerization and characterization will be required to determine the approach
42 to treatment. Groundwater that does not exceed MTCA Method A cleanup levels

1 and conforms to criteria defined in Washington Administrative Code (WAC) 173-
2 201A, Water Quality Standards for Surface Waters in Washington State may be
3 discharged directly or indirectly to the ground surface or surface water.

4 Groundwater containing contaminants at concentrations above MTCA Method A
5 cleanup levels will be treated to meet requirements for discharge, depending on
6 the contaminants and their concentrations. After treatment, discharge could
7 include:

- 8 • Discharge to the ground surface
- 9 • Discharge to surface water
- 10 • Discharge to a publicly owned treatment works
- 11 • Off-site disposal at a private treatment, storage, and disposal (TSD) facility

12 Discharge of treated water to the ground surface will require conformance with
13 MTCA Method A cleanup criteria. Direct or indirect discharge to surface water
14 will require conformance with criteria defined in WAC 173-201A, Water Quality
15 Standards for Surface Waters in Washington State, and will require permitting
16 through Ecology. Discharge to a local sanitary sewer or to a TSD facility will
17 require a temporary waste water treatment permit and conformance with
18 publicly-owned treatment works or facility-specific criteria.

19 **Metals, Solvents, PAHs, Creosote, and PCBs Contamination**

20 Metals, solvents, PAHs, creosote, and PCBs associated with printers, dry cleaners,
21 railroad tracks, auto repair shops, and engraving operations may be encountered
22 during site construction. Mitigation options for these contaminants differ
23 depending on the media contaminated. Mitigation options for soil and
24 groundwater containing these contaminants are discussed below.

25 ***Soil***

26 Soil contamination encountered during construction will require stockpiling and
27 testing to determine its regulatory classification and the most cost-effective
28 management strategies. Concentrations of contaminants will be evaluated
29 relative to MTCA Method A cleanup standards to assess whether the soils would
30 be of concern. MTCA Method A cleanup levels may be used to determine disposal
31 strategies where small amounts of contaminated soils are present, where soils
32 need to be removed and disposed of quickly, and where soils can be easily used
33 as subgrade road material.

34 Soils failing the TCLP or exceeding other dangerous waste criteria must be
35 handled as Washington State dangerous waste.

36 Generators of dangerous waste are required to obtain an ID number for each site.
37 This can be done after the soils have been determined to be dangerous waste. If
38 pre-construction explorations are used to determine where dangerous wastes
39 will be encountered, an ID number can be obtained and soil handling and
40 disposal procedures can be set up prior to construction. Options for reusing and
41 disposing of the contaminated soils include:

- Soils that do not exceed Method A cleanup levels could be placed under roadways if adequate fill capacity exists and the soils meet geotechnical fill requirements.
- Soils that do exceed the Method A cleanup levels or do not meet geotechnical fill requirements could be transported to and disposed at either a treatment facility or a land reclamation facility based on their characteristics.
- Soils designated as dangerous waste could be transported to a hazardous waste landfill or incinerator.

Groundwater

Where contaminated groundwater is generated during construction dewatering, containerization and characterization will be required to determine the approach to treatment. Groundwater that does not exceed MTCA Method A cleanup levels may be discharged directly or indirectly to the ground surface or surface water, provided that discharge conforms to criteria defined in WAC 173-201A, Water Quality Standards for Surface Waters in Washington State.

Groundwater that contains contaminants at concentrations below dangerous waste criteria could be treated and discharged: (a) to the ground surface, (b) to surface water, (c) to a publicly owned treatment works, or (d) to a private TSD facility. Discharge of contaminated water to the ground surface would require conformance with MTCA Method A cleanup criteria. Discharge directly or indirectly to surface water would require conformance with criteria defined in WAC 173-201A, Water Quality Standards for Surface Waters in Washington State, and permitting through Ecology. Discharge to a local sanitary sewer or to a TSD facility would require conformance with the publicly-owned treatment works or facility-specific criteria.

Groundwater that is designated as Dangerous Waste will require disposal at a hazardous waste TSD facility.

5.5.4 Hazardous Materials Disposal Costs

Soil

The following costs are for contaminated soil disposal only and do not include the cost of excavation or transportation to the selected disposal/treatment facility.

Petroleum-contaminated Soils

- Thermal Treatment: \$30 to \$35 per ton
- Landfill Disposal: \$25 to \$30 per ton

Metals-, Volatile Organic Compounds, Creosote-, and Formaldehyde-contaminated Soil

- Landfill Disposal/Non-Dangerous Waste: \$30 per ton
- Landfill Disposal/Dangerous Waste: \$200-320 per ton
- Incineration/Dangerous Waste: \$600 per ton

1 **Groundwater**

2 Groundwater treatment and/or disposal options include permitting for local
3 discharge and/or off-site treatment and disposal.

- 4 • Permitting for Local Discharge: \$2,500 to \$10,000, depending on the
5 type and level of contaminants present.
- 6 • On-site Treatment and Discharge: \$2,500 to \$5,000 per month, depending
7 on the type and level of contaminants present and the volume of water
8 discharged; discharge rate to municipal water treatment facility is \$0.006
9 per gallon.
- 10 • Off-site Treatment and Disposal: \$0.25 to \$2 per gallon, depending on
11 the type and level of contaminants present and volume of discharge.

12 **5.5.5 Operational Mitigation Measures**

13 Contaminants associated with normal operation of the 120th Avenue NE corridor
14 could potentially enter stormwater runoff. These contaminants include fuel and
15 lubricants, compounds from tires, and automobile engine coolants such as
16 ethylene glycol.

17 The proposed enhanced runoff treatment includes treating stormwater from
18 additional impervious surfaces. This likely would be accomplished via
19 bioretention in roadway planters. Because the amount of new impervious
20 surface would be treated, no change in effect is anticipated.

Appendix A
Hazardous Materials Policies and Regulations

Applicable Federal and State Regulations

Numerous federal, state, and local regulations and policies govern decisions concerning hazardous materials issues. A standard list of federal and state regulations that apply to majority of WSDOT projects is provided below. This is not an all-inclusive list of regulations, and further evaluation of applicable local regulations must be conducted for each project.

FEDERAL REGULATIONS

Federal law and regulations relating to hazardous materials and wastes that affect the project include the following:

Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and All Appropriate Inquiries (AAI) (40 CFR Part 312)

Section 101(35)(B)(ii) and (iii) of CERCLA and the Superfund Amendments and Reauthorization Act (SARA) define liability for hazardous waste contamination and require liable parties to take responsibility for cleanup. 40 CFR Part 312, Standards and Practices for All Appropriate Inquiries, establishes specific regulatory requirements and standards for conducting AAI provisions necessary to qualify for certain landowner liability protections under CERCLA. The purpose of Hazardous Materials Discipline Reports is, in part, to address liability issues relating to identification of, and acquisition of previously contaminated property.

Resource Conservation and Recovery Act (RCRA)

RCRA provides requirements for handling, transportation, treatment, storage, and disposal of hazardous materials and wastes. It includes provisions for identifying and classifying hazardous materials and wastes, and through the Hazardous and Solid Waste Amendments (HSWA), creates treatment standards for specific wastes. HSWA also establishes requirements for ownership, operation, maintenance, and closure of underground storage tanks. Any removal, treatment, or transportation of contaminated soils as part of the proposed project would need to be conducted in compliance with RCRA.

Occupational Safety and Health Act (OSHA)

OSHA establishes requirements for site safety procedures, worker training, and worker safety and health standards for employees engaged in work related to hazardous materials. All work relating to the handling of, and potential exposure to, hazardous substances by workers while conducting activities associated with the project must be in compliance with the relevant sections of OSHA.

Clean Water Act (CWA)

The Clean Water Act (CWA) provides for comprehensive federal regulation of all sources of water pollution. Pollution of state waters is controlled by two administrative regulations that implement Chapter 90.48 RCW, Water Pollution Control Act; Chapter 173-201A WAC, Water Quality Standards for Surface Waters of the State of Washington; and Chapter 173-200 WAC, Water Quality Standards for Groundwater of the State of Washington.

Chapter 173-201 WAC indicates that toxic substances above natural background levels will not be introduced into waters of the state if the substance will (1) singularly or cumulatively adversely affect characteristic water uses, (2) cause acute or chronic toxicity to the most sensitive biota dependent on the water, or (3) adversely affect public health. Ecology would employ or require chemical toxicity testing and biological assessments as appropriate to evaluate

compliance with the above-mentioned requirements. WAC 173-201A-160 lists the primary means for controlling municipal, commercial, and industrial waste discharges through the issuance of waste disposal permits.

Several permit programs have been established to address the potential of construction projects that may introduce hazardous substances to surface waters, including wetlands. The State Water Discharge Permit (WAC 173-216) program includes a variety of exemptions, most of which relate to discharges that are permitted under a National Pollution Discharge Elimination System (NPDES) permit or are otherwise authorized by a publicly owned treatment works (POTW) with an authorized pretreatment program. This regulation may apply to stormwater detention basins planned for the project if the water were to contain unacceptable concentrations of polluting materials. The NPDES General Stormwater Permit for Construction Activities requires the development and implementation of a Stormwater Pollution Prevention Plan.

National Environmental Policy Act (NEPA)

NEPA requires that all actions sponsored, funded, permitted, or approved by federal agencies undergo planning to ensure that environmental considerations are given due weight in project decision-making. If the proposed project is partially funded by the Federal Highway Administration, NEPA compliance is likely to be required. One of the major elements addressed in a NEPA assessment is environmental health. Assessment of impacts associated with hazardous materials and waste is a component of the environmental health evaluation.

Endangered Species Act (ESA)

ESA regulates a wide range of activities affecting plants and animals designated as “endangered” or “threatened”. The ESA states that it is unlawful to “take” any animal listed as an endangered species. ESA lists “Endangered” animals or plants that are in danger of being extinct. ESA broadly defines a “take” to include, “harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect,” or an attempt to engage in such conduct. Chinook salmon, bull trout and the bald eagle are listed as threatened under the Federal Endangered Species Act and live within the Green/Duwamish Watershed and Central Puget Sound Watershed. These watersheds extend from the Cascade Mountains to Puget Sound. In Federal Way, roughly the area north of S. 300th Street and east of Pacific Highway drains into the Green River. Steel Lake, Easter Lake, Redondo Creek and Cold Creek drain directly to Puget Sound. The southern part of the city is in the Puyallup River Watershed. In Federal Way, the Hylebos Creek Watershed is the major drainage system within the Puyallup River Watershed. Salmon habitat restoration activities are currently underway in Federal Way.

National Emission Standards for Hazardous Air Pollutants (NESHAP) (Code of Federal Regulations, Title 40, Volume 5, Parts 61 to 71)

The Environmental Protection Agency’s rules concerning the removal and disposal of asbestos-containing materials (ACM) were issued under NESHAP. NESHAP requires a thorough inspection for friable and nonfriable ACM within a structure prior to demolition activities. An accredited inspector as required by the Asbestos Hazard Emergency Response Act (AHERA) must conduct all inspections. The NESHAP regulation also includes specific notification, work practice, packaging, labeling, and disposal requirements.

The Puget Sound Clean Air Agency (PSCAA) requires that a notice of intent be submitted prior to beginning any work on an asbestos demolition. The only exception is asbestos projects involving less than 48 square feet and the removal of nonfriable asbestos containing roofing

material. An AHERA building inspector or competent person must make the determination if it is nonfriable material. There is a notification waiting period and fee that will need to be considered prior to planning any abatement work. Asbestos removed from buildings prior to demolition must be disposed in a landfill permitted to receive ACM.

STATE REGULATIONS

Washington State implements many of the federal statutes pertaining to hazardous materials and wastes along with its own, often more stringent, laws and regulations. These requirements, listed below, take precedence over all other laws for governing business and operations within the state.

Model Toxics Control Act (MTCA) Regulations (Chapter 173-340 WAC)

Chapter 173-340 Washington Administrative Code (WAC) implements MTCA, Revised Code of Washington (RCW) 70.105D. Several administrative rules include strict requirements for site discovery and reporting, site assessments, and hazardous site listing. This regulation defines standard methods used to assess whether a site is contaminated or clean. An overview of the cleanup standards is detailed in WAC 173-340-700 and groundwater and soil cleanup standards are listed in WAC 173-340-720 and WAC 173-340-740, respectively. WAC 173-340-450 sets forth the requirements for addressing underground storage tanks (USTs).

MTCA will apply to any site identified with environmental contamination that may pose a threat to human health and/or the environment during this project. MTCA establishes the acceptable cleanup limits for contaminated media. Cleanups of contaminated sites are likely to be accomplished as independent actions, with technical review provided by Ecology on an as-needed basis as provided for under MTCA.

Dangerous Waste Regulations (Chapter 173-303 WAC).

Chapter 173-303 WAC implements RCRA and the Hazardous Waste Management Act, RCW 70-105. This provides for waste identification procedures unique to Washington State. Waste designation procedures are the most likely portion of this regulation that would affect the project. Detailed requirements for forms and rules related to manifesting and transporting of hazardous waste are included. As stated above, any handling, treatment, or transport of hazardous waste associated with the project would be required to be in compliance with RCRA and also with Washington's Dangerous Waste Regulations and Hazardous Waste Management Act. Contaminated materials generated during construction, including soil, water, and debris, would need to be properly designated before disposal. WAC 173-303-070 through 173-303-110 includes the specific regulations that identify dangerous waste characteristics and criteria. In addition, wastes generated by the contractor during construction would need to be properly designated. The requirements for generators of dangerous waste are included in WAC 173-303-170 through 173-303-230. A transporter of dangerous waste must comply with the procedures listed in WAC 173-303-240 through 173-303-250.

WAC 173-303-145 lists the reporting requirements for spills and discharges into the environment, except when otherwise permitted under state or federal law. This section of the WAC applies "when any dangerous waste or hazardous substance is intentionally or accidentally spilled or discharged into the environment such that human health or the environment is threatened, regardless of the quantity of dangerous waste or hazardous substance." This portion of the regulation also details the required procedures for notification and mitigation should a spill occur on site.

Solid (Non-Dangerous) Waste Disposal (RCW 70.95, Chapter 173-304 WAC)

Under the State Solid Waste Management Act, RCW 70.95 states that primary responsibility for managing solid waste is assigned to local government. The state, however, is responsible for assuring the establishment of effective local programs throughout the state.

The local jurisdiction's Health Department regulates the handling and disposal of solid waste. Identifying the appropriate waste disposal facility is the most likely the portion of local solid waste regulation that could impact the project. The local Health Department evaluate whether a waste material is acceptable at one or more of the public and private solid waste facilities in the county. In some cases, testing may be required prior to disposal. Even waste that is being shipped to a disposal facility out of the county, and soil treatment facilities, falls under the jurisdiction of the local Health Department.

WAC 173-304 lists the Minimum Functional Standards for Solid Waste Handling. WAC 173-304-200 designates the on-site containerized storage, collection, and transportation standards for solid waste. The regulations apply to all persons storing containerized solid waste that is generated on-site. Revisions are anticipated for Chapter 173-304 WAC, and the final revised rules should be reviewed prior to the commencement of construction. The updated solid waste rule is likely to include new provisions for demolitions and inert waste streams.

Water Pollution Control Act

RCW 90.48 implements two administrative regulations that control pollution in state waters. Water Quality Standards for Surface Waters of the State of Washington, Chapter 173-201A WAC, establishes standards for toxic substances, conventional parameters (i.e., pH, dissolved oxygen, temperature), and aesthetic values for marine and fresh surface waters. Water Quality Standards for Groundwater of the State of Washington contain similar regulations for groundwater, with special emphasis on radionuclides and carcinogens, due to potability issues. Any construction or operational activities associated with the project must comply with Washington's water quality standards. Wastewater Discharges to Surface Waters, Chapter 173-220 WAC regulates discharges to surface water from construction projects. Under this program, it is unlawful to discharge polluting matter to surface waters without a National Pollutant Discharge Elimination System (NPDES) permit. A general NPDES permit for construction would be required for the project. Wastewater Discharges to the Ground, Chapter 173-216 WAC, regulates discharge of stormwater to detention basins if this water contains unacceptable concentrations of polluting matter. The proposed project would likely be exempt from the requirements of this regulation if an NPDES Stormwater Permit for construction is acquired. This should be verified during the permitting process conducted for this project.

Water Quality Standards for Surface Waters (Chapter 173-201A WAC)

WAC 173-201A-040 is the section of the Water Quality Standards that specifically deals with toxic substances within surface waters of the state. The WAC indicates that toxic substances, above natural background levels, shall not be introduced into waters of the state if: 1) The substance will singularly or cumulatively adversely affect characteristic water uses, 2) Cause acute or chronic toxicity to the most sensitive biota dependent on the water, or 3) Adversely affect public health. The Department of Ecology shall employ or require chemical toxicity testing and biological assessments as appropriate to evaluate compliance with the above-mentioned requirements. WAC 173-201A-160 lists the primary means for controlling municipal, commercial, and industrial waste discharges through the issuance of waste disposal permits.

Wastewater Discharges to Ground (Chapter 173-216 WAC)

The State Water Discharge Permit program includes a variety of exemptions, most of which relate to discharges that are permitted under an National Pollution Discharge Elimination System (NPDES) permit or are otherwise authorized by a publicly owned treatment works (POTW) with an authorized pretreatment program. This regulation may apply to stormwater detention basins planned on the project if the water contains unacceptable concentrations of polluting materials.

Underground Utilities (RCW 19.122)

There are multiple operating utilities that exist within the project footprint. RCW 19.122 states that an excavator shall provide notice of the scheduled commencement of excavation to all owners of underground facilities through a one-number locator service. The RCW also states that all owners of underground facilities within a one-number locator service shall subscribe to the service. Notice needs to be communicated to the locator service no less than 2 days and no more than 10 days prior to the commencement of excavation activities. If the excavator discovers utilities that were not identified or damages a utility, the excavator will stop work and notify the locator service and the owner of the utility service if possible. If the damage causes an emergency situation, the excavator shall also alert the appropriate public health agencies and take all steps necessary to ensure public safety. A failure to notify the locator service of damage to a hazardous liquid or gas pipeline is subject to a civil penalty of not more than ten thousand dollars for each violation. Any excavator who willfully or maliciously damages a field-marked underground facility shall be liable for triple the costs incurred in repairing or relocating the facility.

Underground Storage Tank Statute and Regulations (RCW 90-76, Chapter 173-360 WAC)

The purpose of RCW 90-76 and the Chapter 173-360 WAC regulations is to address the serious threat posed to human health and the environment by leaking underground storage tank systems (LUSTS) containing petroleum and other regulated substances. The regulations describe the enforcement, notification, and reporting requirements for LUSTS. The regulations also detail the performance standards and operating and closure requirements.

Washington Industrial Safety and Health Act (WISHA)

Occupational Health Standards Chapter 296-62 WAC implements the RCW 49-17 . RCW 49-17 also implements Safety Standards for Construction Work, Chapter 296-155 WAC, which contains the Safety Standards for Asbestos and Encapsulation Chapter 296-65 WAC. These safety requirements apply to all construction activities, and the regulations are enforced by the Washington State Department of Labor and Industries (L&I).

The standards include rules covering operations at known hazardous waste sites and initial investigations conducted at sites before the presence or absence of hazardous substances has been determined. Also included are rules on site assessment and control, training, protective equipment, and emergency response. Chapter 296-155 WAC requires employers to inform their workers of the potentially hazardous conditions of the workplace. When WSDOT informs the Contractor of these conditions, the Contractor is required to train the workers to recognize hazardous conditions in the workplace and train them how to respond to and report such conditions. It is important the WSDOT inform the Contractor though the Contract and/or Special Provisions so that the Contractor is aware and responsible to prepare its employees to appropriately and safely handle encounters of hazardous materials with minimal delays.

The safety requirements also provide specific procedures for work with asbestos-containing materials (ACM) and lead-based paint (LBP). L&I regulate asbestos and LBP removal and encapsulation (WAC296-62 Part I-1 and 296-155). All contractors must be certified in asbestos and LBP removal, and their supervisors and laborers must be trained. For asbestos, L&I and the Puget Sound Clean Air Agency (PSCAA) must be notified of any asbestos removal. Fees also must be paid, calculated on the linear or square amount of material removed. ACM and LBP must be disposed of in a specially permitted landfill. This includes disposable clothing, respirator filters, and equipment, as well as the ACM and LBP itself. The use of landfills results in an irreversible and irretrievable commitment of landfill space. Liability for asbestos and LBP disposal remains with WSDOT indefinitely.

Hazardous Waste Operations and Treatment, Storage, and Disposal Facilities (Chapter 296-62 WAC Part P, RCW 49-17)

Chapter 296-62 WAC Part P includes all of the required procedures for work involving hazardous materials. Due to the possible impacts indicated above for specific sites, there are sections of Chapter 296-62 WAC that are of key importance for this project.

Chapter 296-62 WAC Part P also details the requirements for handling drums and containers. Unlabeled drums and containers must be considered to contain hazardous waste and handled accordingly until the contents are positively identified and labeled. Drums and containers that cannot be moved without rupture, leakage, or spillage must be emptied into a sound container. Personal protective equipment selection protocol is outlined in WAC 296-62-30605. The training requirements for site personnel are included within multiple sections of Part P depending upon the designation of the contamination on-site.

Safety Standards for Construction Work - Lead (Chapter 296-155 WAC)

Chapter 296-166 WAC indicates that workers may not be exposed to lead at concentrations greater than fifty micrograms per cubic meter of air ($50\mu\text{g}/\text{m}^3$) averaged over an 8-hour period. Chapter 296-166 WAC also outlines the personal protective equipment that shall be given to employees as well as medical surveillance procedures that are to be implemented for exposed personnel.

General Occupational Health Standards – Asbestos (Chapter 296-62 WAC Part I-1)

Chapter 296-62 WAC requires that prior to commencement of work an owner must conduct a good faith inspection to determine whether materials to be worked on or removed contain asbestos. An accredited inspector must conduct the good faith inspection. Chapter 296-62 WAC Part I-1 requires that an employer shall ensure that no employee is exposed to an airborne concentration of asbestos in excess of 0.1 fiber per cubic centimeter (0.1f/cc) of air as an eight-hour time-weighted average. Besides the permissible exposure limit, the regulation also requires appropriate respiratory protection as well as exposure assessment and monitoring.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 06/23/2009 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/17/2010 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/17/2010 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 02/17/2010 has revealed that there are 15 RCRA-CESQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

State- and tribal - equivalent NPL

HSL: The Hazardous Sites List is a subset of the CSCSL Report. It includes sites which have been assessed and ranked using the Washington Ranking Method (WARM).

A review of the HSL list, as provided by EDR, and dated 02/17/2010 has revealed that there is 1 HSL site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
TIKI CAR WASH Facility Type: Hazardous Sites List	11909 NE 8TH ST	WNW 0 - 1/8 (0.059 mi.)	F43	139

State- and tribal - equivalent CERCLIS

CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the CSCSL list, as provided by EDR, and dated 04/26/2010 has revealed that there are 20 CSCSL sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Ecology's Leaking Underground Storage Tanks Site List.

A review of the LUST list, as provided by EDR, and dated 05/24/2010 has revealed that there are 26 LUST sites within approximately 0.5 miles of the target property.

CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the CSCSL NFA list, as provided by EDR, and dated 04/26/2010 has revealed that there are 13 CSCSL NFA sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 02/17/2010 has revealed that there are 33 RCRA-NonGen sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

ICOS CORPORATION (Continued)

1000838862

Amount (Lbs): 5618

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 4680

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Amount (Lbs): 4623

Waste code: D007
Waste name: CHROMIUM
Amount (Lbs): 4571

Waste code: D022

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of

Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

EPA Region: 10
Classification: Non-Generator
Description: Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:

Owner/operator name: BELLEVUE CITY
Owner/operator address: PO BOX 90012
BELLEVUE, WA 98009
Owner/operator country: US
Owner/operator telephone: Not reported
Legal status: Private
Owner/Operator Type: Owner
Owner/Op start date: 01/29/1987
Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Violation Status: No violations found

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when

Map ID
Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

SAFeway WAREHOUSE INC DIST CENTER (Continued)

1000225234

complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

Owner/Operator Type: Operator
Owner/Op start date: 12/31/2003
Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Historical Generators:

Date form received by agency: 12/31/2007
Facility name: COCA COLA BOTTLING CO BELLEVUE
Classification: Not a generator, verified

Date form received by agency: 12/31/2005
Facility name: COCA COLA BOTTLING CO BELLEVUE
Classification: Not a generator, verified

Date form received by agency: 12/31/2003

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Date Ecology Received Report: 12/13/02
Contaminants Found at Site: Petroleum products
Media Contaminated: Groundwater, Soil
Waste Management: Tank
Region: North Western
Type of Report Ecology Received: Interim cleanup report
Site Register Issue: 98-55
County Code: 17
Contact: Not reported
Report Title: November 2002 Annual Report

Owner/operator country: US
Owner/operator telephone: Not reported
Legal status: Private
Owner/Operator Type: Operator
Owner/Op start date: 05/14/1997
Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Historical Generators:

Date form received by agency: 12/31/2007
Facility name: CHEVRON USA INC SS 97531
Classification: Not a generator, verified

Date form received by agency: 12/31/2005
Facility name: CHEVRON USA INC SS 97531
Classification: Not a generator, verified

Date form received by agency: 12/31/2003
Facility name: CHEVRON USA INC SS 97531
Classification: Not a generator, verified

Violation Status: No violations found

Evaluation Action Summary:

Evaluation date: 01/12/1993
Evaluation: COMPLIANCE ASSISTANCE VISIT
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: State

means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Historical Generators:

Date form received by agency: 12/31/2007
 Facility name: PUBLIC STORAGE BELLEVUE
 Classification: Large Quantity Generator

Biennial Reports:

Last Biennial Reporting Year: 2009

Annual Waste Handled:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
 Amount (Lbs): 2403

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
 Amount (Lbs): 820

Violation Status: No violations found

Date form received by agency: 12/31/2003
Facility name: KING CNTY DOT METRO TRANSIT BELLEVUE
Site name: METRO KING CNTY DOT TRANSIT BELLEVUE
Classification: Not a generator, verified

Date form received by agency: 09/01/1993
Facility name: KING CNTY DOT METRO TRANSIT BELLEVUE
Site name: MUNIC OF METRO SEATTLE-BELLEVU
Classification: Large Quantity Generator

Violation Status: No violations found

Evaluation Action Summary:

Evaluation date: 11/20/2006
Evaluation: FOCUSED COMPLIANCE INSPECTION
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: State

FINDS:

Registry ID: 110005341736

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Biennial Reports:

Last Biennial Reporting Year: 2009

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 520

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs): 80

Waste code: D008
Waste name: LEAD
Amount (Lbs): 200

Waste code: P105
Waste name: SODIUM AZIDE
Amount (Lbs): 10

Waste code: U123
Waste name: FORMIC ACID (C,T)

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCES (National Center for Education Statistics) is the primary federal entity for collecting and analyzing data related to education in the United States and other nations and the institute of education sciences.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Form Comm: Overlake Hospital had a single pickup of a bottle of extremely hazardous waste (P105, 10 lbs) in 2007 that caused it to designate as an LQG. The hospital was an MQG in 2006 and expects to designate as an MQG in 2008. Therefore, the hospital will operate and manage its dangerous waste as an MQG.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2009

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 2306

Waste code: D035
Waste name: METHYL ETHYL KETONE
Amount (Lbs): 458

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 458

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

EPA Region: 10
Classification: Non-Generator
Description: Handler: Non-Generators do not presently generate hazardous waste

**Actual:
56 ft.**

Owner/Operator Summary:

Owner/operator name: WA DOT FACILITIES HAZMAT
Owner/operator address: 10833 NORTHUP WAY
BELLEVUE, WA 98004
Owner/operator country: US
Owner/operator telephone: Not reported
Legal status: Private
Owner/Operator Type: Operator
Owner/Op start date: 10/10/1996
Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/31/2010	Source: EPA
Date Data Arrived at EDR: 04/02/2010	Telephone: N/A
Date Made Active in Reports: 04/12/2010	Last EDR Contact: 07/14/2010
Number of Days to Update: 10	Next Scheduled EDR Contact: 10/25/2010
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/31/2010	Source: EPA

Date Made Active in Reports: 04/12/2010	Last EDR Contact: 07/14/2010
Number of Days to Update: 10	Next Scheduled EDR Contact: 10/25/2010
	Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 01/29/2010	Source: EPA
Date Data Arrived at EDR: 02/09/2010	Telephone: 703-412-9810
Date Made Active in Reports: 04/12/2010	Last EDR Contact: 07/12/2010
Number of Days to Update: 62	Next Scheduled EDR Contact: 10/11/2010
	Data Release Frequency: Quarterly

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA's Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 06/23/2009	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/15/2010	Telephone: 703-603-8704

Number of Days to Update: 26	Next Scheduled EDR Contact: 10/25/2010
	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 02/17/2010
Date Data Arrived at EDR: 02/19/2010

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 02/17/2010

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 12/20/2009	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/20/2010	Telephone: 703-603-0695
Date Made Active in Reports: 04/12/2010	Last EDR Contact: 06/14/2010
Number of Days to Update: 82	Next Scheduled EDR Contact: 09/27/2010
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 12/20/2009	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/20/2010	Telephone: 703-603-0695

Number of Days to Update: 20	Next Scheduled EDR Contact: 10/18/2010
	Data Release Frequency: Annually

State- and tribal - equivalent NPL

HSL: Hazardous Sites List

The Hazardous Sites List is a subset of the CSCSL Report. It includes sites which have been assessed and ranked using the Washington Ranking Method (WARM).

Date of Government Version: 02/17/2010	Source: Department of Ecology
Date Data Arrived at EDR: 02/19/2010	Telephone: 360-407-7200
Date Made Active in Reports: 02/24/2010	Last EDR Contact: 05/18/2010
Number of Days to Update: 5	Next Scheduled EDR Contact: 08/30/2010
	Data Release Frequency: Semi-Annually

State- and tribal - equivalent CERCLIS

CSCSL: Confirmed and Suspected Contaminated Sites List

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 04/26/2010	Source: Department of Ecology
Date Data Arrived at EDR: 04/29/2010	Telephone: 360-407-7200
Date Made Active in Reports: 05/19/2010	Last EDR Contact: 07/28/2010
Number of Days to Update: 20	Next Scheduled EDR Contact: 11/08/2010
	Data Release Frequency: Semi-Annually

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: Solid Waste Facility Database

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 06/15/2010	Source: Department of Ecology
Date Data Arrived at EDR: 06/16/2010	Telephone: 360-407-6132
Date Made Active in Reports: 07/15/2010	Last EDR Contact: 06/14/2010

State and tribal Brownfields sites

BROWNFIELDS: Brownfields Sites Listing

A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

Date of Government Version: 04/26/2010	Source: Department of Ecology
Date Data Arrived at EDR: 04/29/2010	Telephone: 360-725-4030

Number of Days to Update: 20	Next Scheduled EDR Contact: 11/08/2010
	Data Release Frequency: Varies

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

CSCSL NFA: Confirmed and Contaminated Sites - No Further Action

The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead, a No Further Action code is entered based upon the type of NFA determination the site received.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Number of Days to Update: 25	Next Scheduled EDR Contact: 09/13/2010
	Data Release Frequency: Quarterly

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 03/17/2008

	Data Release Frequency: Quarterly

PADS: PCB Activity Database System

PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 09/01/2009	Source: EPA
Date Data Arrived at EDR: 10/21/2009	Telephone: 202-566-0500
Date Made Active in Reports: 12/01/2009	Last EDR Contact: 04/22/2010
Number of Days to Update: 41	Next Scheduled EDR Contact: 08/02/2010
	Data Release Frequency: Annually

MLTS: Material Licensing Tracking System

MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 03/18/2010	Source: Nuclear Regulatory Commission
Date Data Arrived at EDR: 04/06/2010	Telephone: 301-415-7169
Date Made Active in Reports: 05/27/2010	Last EDR Contact: 06/14/2010
Number of Days to Update: 51	Next Scheduled EDR Contact: 09/27/2010
	Data Release Frequency: Quarterly

RADINFO: Radiation Information Database

The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.

Date of Government Version: 04/13/2010	Source: Environmental Protection Agency
Date Data Arrived at EDR: 04/14/2010	Telephone: 202-343-9775
Date Made Active in Reports: 05/17/2010	Last EDR Contact: 07/14/2010
Number of Days to Update: 33	Next Scheduled EDR Contact: 10/25/2010
	Data Release Frequency: Quarterly

FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 04/14/2010	Source: EPA
Date Data Arrived at EDR: 04/16/2010	Telephone: (206) 553-1200
Date Made Active in Reports: 05/27/2010	Last EDR Contact: 07/07/2010
Number of Days to Update: 41	Next Scheduled EDR Contact: 09/27/2010
	Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

TACOMA/PIERCE COUNTY:

Closed Landfill Survey

Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: Rextag Strategies Corp.
Telephone: (281) 769-2247
U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Daycare Center Listing

Source: Department of Social & Health Services

Telephone: 253-383-1735

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2009 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

South Map: 47122-E2 MERCER ISLAND, WA
Most Recent Revision: 1983

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

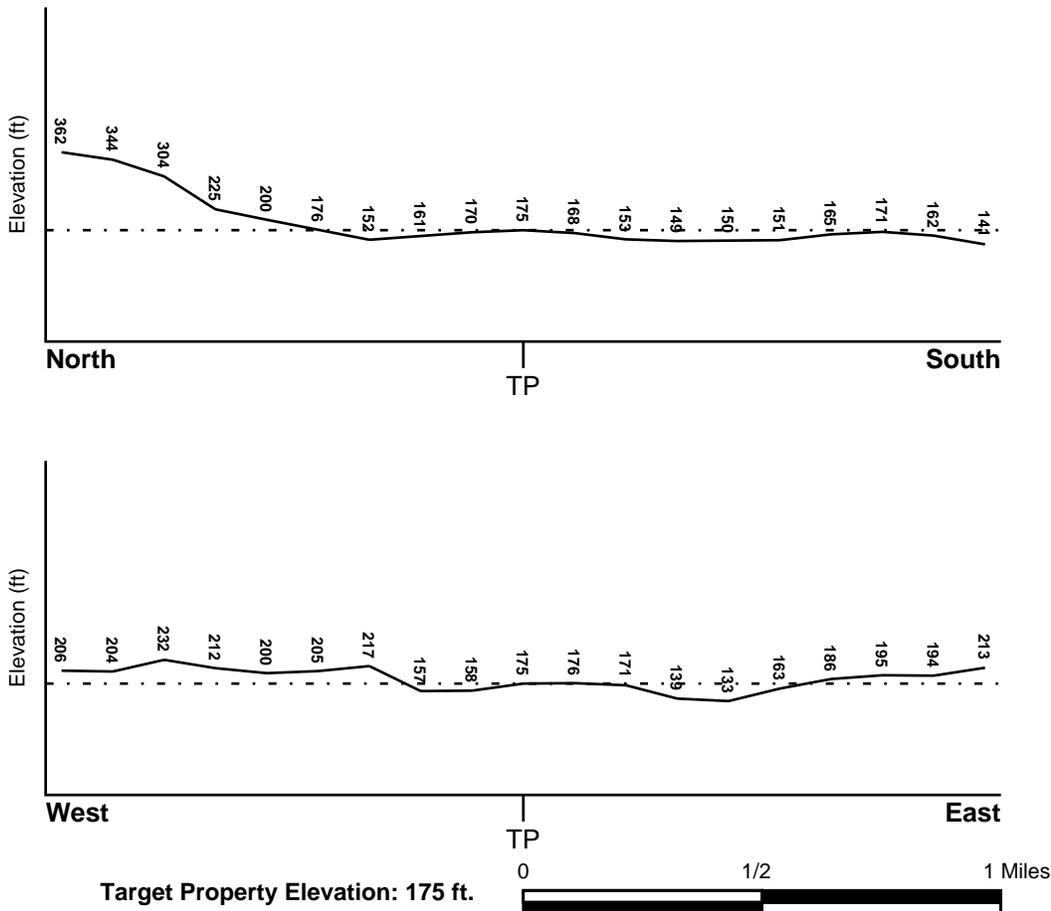

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ESE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u> KING, WA	FEMA Flood <u>Electronic Data</u> YES - refer to the Overview Map and Detail Map

53033C0652F - FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u> MERCER ISLAND	NWI Electronic <u>Data Coverage</u> YES - refer to the Overview Map and Detail Map
---	--

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/4 - 1/2 Mile East
Site Name:	BELLEVUE PLATING CO INC
Site EPA ID Number:	WAD078194107
Groundwater Flow Direction:	NOT AVAILABLE
Inferred Depth to Water:	15 feet to 25 feet
Hydraulic Connection:	The uppermost water-bearing strata is a glacial drift composed of sands, gravel, and clay with lenses of consolidated till.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
---------------	-------------------------	---

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
4	1/4 - 1/2 Mile SE	E
G27	1/2 - 1 Mile SSW	Varies
G28	1/2 - 1 Mile SSW	Not Reported
30	1/2 - 1 Mile South	NW

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Tukwila

Soil Surface Texture: muck

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	18 inches	muck	A-8	Highly organic soils, Peat.	Max: 14 Min: 4	Max: Min:
2	18 inches	59 inches	stratified diatomaceous earth to muck	A-8	Highly organic soils, Peat.	Max: 14 Min: 4	Max: Min:

Soil Map ID: 3

Soil Component Name: Alderwood

Soil Surface Texture: gravelly sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 84 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 0.42 Min: 0.01	Max: 6 Min: 5.1
2	11 inches	26 inches	very gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 0.42 Min: 0.01	Max: 6 Min: 5.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
3	26 inches	59 inches	very gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 0.42 Min: 0.01	Max: 6 Min: 5.1

Soil Map ID: 4

Soil Component Name: Arents

Soil Surface Texture: gravelly sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 84 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	25 inches	gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 0.42 Min: 0.01	Max: 6 Min: 5.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil

COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 705 Min: 141	Max: 6.5 Min: 5.6

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

FUEL TANK INSTALLATION CO., INC.

UNDERGROUND STORAGE TANK REMOVAL AND SOIL SAMPLE SUMMARY REPORT

October 18, 1999

Re: Bakker's Fine Drycleaning, 12002 NE 8th Street, Bellevue, WA.

This report presents the site assessment services performed by myself, Thomas H. Anderson, relating to the 6000 gallon steel double wall underground storage tank removal, soil samples and laboratory report at the above referenced property.

PURPOSE

The purpose of this work was to assess the conditions of the adjacent soils following the removal of the 6000 gallon underground storage tank (UST). This work was accomplished by Fuel Tank Installation Company, Inc. (FTICI). This work included removal of the UST and collection of soil samples from the area of the excavation to be delivered to a laboratory for analysis. This report is prepared to present the events as they occurred and to help illustrate the conditions present at the site.

SCOPE OF INSPECTION

The scope of services included: removal and disposal of the 6000 gallon UST, visual and olfactory inspection of the soil in the vicinity of the excavation, collection of soil samples for analysis of Total Petroleum Hydrocarbons (TPH) by an approved laboratory using methods NWTPH-Dx, and preparation of this written report.

SITE DESCRIPTION

The subject site is located at 12002 NE 8th Street, Bellevue, WA., see F-4 on Vicinity Map (attachment #1). The property is used as a drycleaning business. The UST was located on the north side of the building (attachment #2). The UST was used to store stoddard solvent.

PROJECT DESCRIPTION AND SITE OBSERVATIONS

On October 11, 1999 the UST was inerted by Marine Chemist, Certificate #43992 (attachment #3). The UST was then excavated and removed. The UST was disposed of

in the city of Seattle in a legal manner. Three grab soil samples were collected in prepared four ounce sampling jars by FTICI personnel at the South-1, West-2 and East-3 areas of the excavation site just above the water line (see attachment #2). A chain of custody was completed at the time of transport (attachment #4). Visual and olfactory observations by FTICI personnel noted that no obvious signs of petroleum contaminated soil existed. The soil samples were taken to Friedman & Bruya, Inc. for analysis (attachment #5 A&B). Laboratory test results of the soil samples collected from the excavation area confirmed that the soils tested were well below the Model Toxics Control Act (MTCA) Method A* clean up guidelines of 200 parts per million (ppm). The UST site was backfilled with clean fill material and compacted.

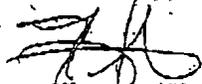

LIMITATIONS

This report has been prepared using generally accepted professional practices, related to the nature of the work accomplished, in the same or similar localities, at the time the services were performed. This report was prepared for the use of Bakker's Fine Drycleaning, 12002 NE 8th Street, Bellevue, WA. This report should not be construed to represent a legal opinion. No other conditions, expressed or implied, should be understood.

If there are any questions concerning this information please call me at 206-244-8020.

Thank you for this opportunity to do business with you!

Sincerely,

Thomas H. Anderson

Bakkers Fine Dry Cleaning
11855 Northeast 8th
Bellevue, Washington 98005

Attention: William Doyle, Facilities Manager

Subject: Closure Report
Multiple Underground Storage Tanks
11855 Northeast 8th
Bellevue, Washington

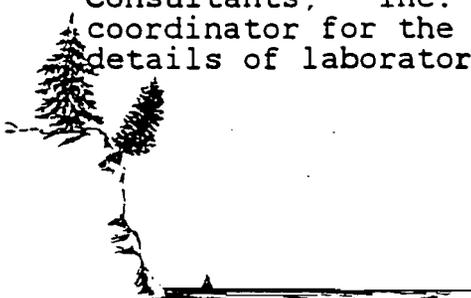

Gentlemen:

In accordance with the terms of our proposal of June 28, 1989, the Environmental Services Division of Geotech Consultants, Inc. has completed field observation, documentation, and laboratory analysis associated with formal "closure" of multiple underground storage tanks (UST's) at the subject site. This activity was initiated to satisfy regulatory requirements imposed under 40 CFR, part 280.72, pertaining to site assessments at time of closure. This report provides a summary of our field and laboratory methods along with results and conclusions.

METHODOLOGY/SCOPE OF WORK

Agency Notification

In compliance with 40 CFR, part 280.71, a letter of notification to the implementing agency (Washington Department of Ecology - WDOE) was sent on June 23, 1989 by Mr. William Doyle of Bakker's Cleaners. A copy of this letter is on file in our office. In addition, in compliance with the request of the Northwest Regional WDOE office, a telephone call was made to the agency at the time of tank removal. Finally, environmental staff of Geotech Consultants, Inc. consulted with Mr. Joe Hickey, UST coordinator for the WDOE Northwest Regional Office regarding details of laboratory testing of soils.

Tank Excavation/Soil and Groundwater Sampling

From August 8 through August 10, 1989 an environmental engineer from Geotech Consultants, Inc. was present during the removal of multiple UST's at the subject site. Tank removal was performed using a track-mounted backhoe operated by Joe Hall Construction of Fife, Washington. Prior to removal, the tank was "conditioned" in a manner consistent with guidelines offered for such work in API Recommended Practice 1604 (Removal and Disposal of Underground Petroleum Storage Tanks), and API Publication 2015. The removal was witnessed by Richard Henderson, Fire Marshall for the City of Bellevue.

Objectives for our participation in the project included:

- (1) Photo-documentation of the condition of the UST's along with soil and groundwater appearance in the tank excavation.
- (2) Sampling of soil and groundwater for subsequent laboratory analysis.
- (3) Generation of a coherent report documenting the activity and findings.

Soil Sampling

With respect to details of soil sampling, following current WDOE guidelines, we obtained a soil sample from each of the four sides of each excavation, and from the bottom of each excavation. Samples were placed in sterilized glass jars with teflon lids furnished by the project laboratory. Samples were stored in an iced chest at the site and taken to the lab in this condition to preserve sample integrity by minimizing excessive dissipation of volatile fraction hydrocarbons. Each jar was clearly labeled as to sampling location, time of sampling, sampling person, project number, etc. EPA recommended protocol for sample management, including maintenance of chain-of-custody documentation, was observed during the course of the project.

Laboratory Analysis

As the UST's at this site reportedly had contained solvents, diesel and distillates during their operating life, EPA Method 418.1 and EPA Method 8010 were used to analyze soil samples. These methods provide a basis for comparison of site conditions at UST sites published in current WDOE guidelines. The detection sensitivity for Method 418.1 is approximately 1 part per million (ppm) for petroleum in water and 5 ppm for petroleum in soils. In addition to EPA Method 418.1, Geotech Consultants, Inc. included one soil sample using EPA Method 8010 for analysis underneath the tank area. This analysis was performed in an effort to assess the potential for the presence of halogenated volatile organic compounds. Included in this family of compounds are many common dry cleaning solvents such as carbon tetrachloride and trichloroethylene.

The test methodology was by Gas Chromatography (GC) accompanied by a Hall-type detector in accordance with EPA Method 8010. Detection limits using this methodology are on the order of 1 part per billion (ppb).

RESULTS OF CLOSURE INVESTIGATION

General Discussion

The subject site is situated on the north side of Northeast 8th Street in Bellevue, Washington, approximately one mile east from the "core" high-rise area. Two buildings on the property are used as dry cleaning facilities. One building is located on the east side of the property and is used for dry cleaning operations. The second building is located directly west and is used for office space and storage.

This site is located in an area underlain by glacially-consolidated materials. Soil materials in this locality are typically characterized by glacial till, clayey silt and gravelly sands. Glacial till is a mixture of compact silt, clay, gravel and sand.

Some minor groundwater seepage was noted during the tank excavation at a depth of approximately eight feet below the ground surface.

Observations During Tank Removal

The multiple tanks removed on August 8 through August 10 included: one 6,000-gallon-capacity UST used for stoddard solvent, one 2,000-gallon-capacity diesel tank, one 2,000-gallon tank formerly used to store distillates (previously thought to be a 400 to 500-gallon tank), and one 200-gallon tank formerly used to store solvents.

Tanks on the property were separated into two adjoining excavations. Excavation No. 1 contained the 200-gallon solvent tank, the 2,000-gallon distillate tank, and the 2,000-gallon diesel tank. This excavation measured approximately 21 feet in width by 28 feet in length, and was 13 feet deep at a location immediately northeast of the existing dry cleaning building. Excavation No. 2 contained the 6,000-gallon stoddard tank and measured approximately 15 feet in width, 34 feet in length, and 11 feet in depth.

All tanks visually appeared to be in very good condition. A review of all tank distribution lines showed no corrosion, holes or defects. All of the tanks had been originally installed in an inert brown sand backfill material.

A characterization of a typical profile of materials/native soil conditions adjacent to the tank excavation (excluding the tank backfill) is as follows:

<u>Depth Range</u>	<u>Soil/Material Description</u>
0 - 3 inches	Asphalt surface pavement
4 - 6 inches	Crushed rock pavement subgrade
6 - 18 inches	Gravelly sand sub-base
1.5 - 5 feet	Light brown silty clay with mottled grey lenses. Firm to stiff, moist.
5.0 - 13 feet	Grey silty clay with occasional sand lenses. Hard, very moist.

During the excavation, discoloration or iridescent "sheens" were noticed in some soil and groundwater near the 2,000-gallon distillate and 200-gallon solvent tanks. In addition, a hydrocarbon odor was detected within the same area. Upon further investigation during the excavation and

tank removal process, it was established that a crushed 4-inch tile drain line was leaking into the subsurface soil within the area of the distillate and solvent tanks, discharging water from a 2-inch floor drain connected to the 4-inch tile line beneath the dry cleaning building. The 2-inch floor drain is connected directly to the stoddard tank room inside the building by two floor drains. According to the operator, this area has been the location of occasional "accidental" spills discharging stoddard fluid directly into the drains during cleanup.

As the excavation process continued, the contaminated water appeared to be confined within the backfill bedding material of the 2,000-gallon distillate tank and the 200-gallon solvent tank. Following the removal of these two tanks, the remaining sand bedding and accumulated water was overexcavated and removed from the site. No further hydrocarbon odor or iridescent "sheens" were noted in the soil or groundwater after this removal. Photographs were made of the excavation to document this observation.

The broken 4-inch tile drain leading from the building has been replaced with a 4-inch PVC drain line and the 2-inch floor drain has been reconnected to the PVC drain line. Based on these repairs, no further seepage of contaminants below the surface is anticipated at this time. Photographs were also made of this repair procedure.

Hydrocarbon Analysis of Soil and Groundwater

As mentioned earlier, a total of five soil samples were obtained from each excavation for laboratory analysis for total petroleum hydrocarbons using EPA Method 418.1 (infrared spectro-photometry). In addition, a single sample from the floor of excavation Number one was analyzed in accordance with EPA Method 8010 for halogenated volatile organic compounds. The following table provides a summary of the results of the laboratory analysis.

As subsurface water encountered during this investigation was attributed solely to seepage from the broken 4-inch tile and connecting 2-inch floor drain, no water samples were analyzed for this site. The removal of contaminated bedding sand and subsequent water contained in the sand left the site devoid of water at the excavation floor.

CONCLUSIONS/RECOMMENDATIONS

Based on the information developed as a result of this closure investigation, it appears that the soil and groundwater proximal to the former UST installation were not significantly contaminated as a result of the installation's presence or operation. Having satisfied the site assessment requirements of 40 CFR, parts 280.71 and 280.72 in a manner consistent with the guidelines for such actions provided by the Washington State Department of Ecology, and having found no residual hydrocarbon contamination exceeding limits prescribed under prevailing regulatory guidelines of this state, we conclude that no further characterization of this tank installation is required and that it has been properly closed in conformance with the intent and purpose of the aforesaid federal and state regulations-guidelines.

LIMITATIONS

This report has been prepared for specific application to this project in a manner consistent with that level of care and skill normally exercised by members of the environmental science profession currently practicing under similar conditions in the area, and in accordance with the terms and conditions set forth in our proposal dated June 28, 1989. This report is for the exclusive use of Bakkers Fine Dry Cleaning and their representatives. No other warranty, expressed or implied, is made. If new information is developed in future site work which may include excavations, borings, studies, etc., Geotech Consultants, Inc., should be allowed to reevaluate the conclusions of this report and to provide amendments as required.

We appreciate the opportunity to serve you on this interesting project and we trust that the information provided here will be of value in your planning efforts. If you have any questions, or if we can be of further service, please do not hesitate to contact us.

Respectfully submitted,
GEOTECH CONSULTANTS, INC.

Upon discovery of the abandoned sewer pipe and running water, the City of Bellevue was notified. Subsequent actions regarding the sewer pipe and soils are discussed later in this report.

The field activities were conducted during the week of 23 September, 1991. Photographs were taken during the course of the field activities and are attached. This report discusses the environmental oversight and construction activities undertaken to remove diesel and mineral spirits impacted soils, and characterization and monitoring of groundwater at the site during this clean-up.

Background

The Avis Sales Lot property has been owned and operated by Avis Rent-A-Car Systems as an automobile sales lot since approximately 1976. Prior to Avis, the lot was owned by Dubose, Inc. for approximately three years (1973-1976). Prior to then, the lot was owned by Gulf Oil and prior to Gulf by Fletcher Oil. Historical records indicate that Gulf and Fletcher operated the site as a commercial gas station and automobile service station. The commercial gasoline station was built in 1956. A records search to determine when the petroleum handling/dispensing equipment operated by Gulf and Fletcher was removed from the site has not been conducted.

In 1991, Avis initiated a property transaction for the Avis Sales Lot. As part of the transaction, a Phase II property investigation was conducted for the potential buyer by Geotech Consultants of Bellevue, Washington. Exploratory soil borings with monitoring well installations were conducted. Geotech identified diesel contaminated soils and gasoline contaminated groundwater and recommended additional investigation to determine the source for the contamination that it found.

In July of 1991, Petroleum Services Unlimited was contracted to investigate the extent of diesel contaminated soils at the site. During this investigation, these soils were approximately delineated in the area to the north of the building at the site. Also during the investigation, soils containing low levels of mineral spirits were identified in the south west portion of the site adjacent to NE 8th Street in an exploratory test pit. This mineral spirits contamination was determined to be below Ecology cleanup guidelines and no further action was taken regarding these soils.

Summary and Recommendations

Based on the information and data presented herein, Petroleum Services summarizes the following regarding the area to the north of the Avis building at the Avis Sales Lot located at 11969 Bellevue-Redmond Road in Bellevue, Washington:

Based on previous subsurface investigations at the Avis Sales Lot, diesel contamination has been identified in site soils to the north of the existing building. The source of the contamination is at present unknown, but based on the observed subsurface conditions, an area of pea gravel fill bounded by a verticle cut in the native soils appears to be a former UST excavation. As indicated by field observation and confirmation sampling, the extent of diesel contamination above the groundwater table was isolated to within a few feet of the native soils in the verticle cut.

The extent of the diesel contamination has been removed with the exception of a pocket of soils at the northern portion of the cleanup action excavation. This pocket is below MTCA Method A Cleanup Levels (WAC 173-340-740). Further sampling was conducted approximately 6 feet north of this area during drilling and monitoring well MW6 installation. A soil sample collected from the 3.5 to 5 foot depth in the boring did not detect petroleum hydrocarbons. This would indicate that diesel contaminated soils do not penetrate into native soils beyond the perimeter of the cleanup action excavation.

Diesel contaminated soils adjacent to the north wall of the Avis building remain at the site. This contamination was identified during Petroleum Services extent of contamination investigation in July 1991. During this exploratory work, a sample (PCA-TP1-2) was collected using a decontaminated stainless steel hand auger in the side wall of a test pit at the 4 foot depth. Analytical results for the sample by EPA Method 8015 indicated diesel contamination at 2200 parts per million. This area of contamination was not excavated because of the potential for structural damage to the Avis building. Due to the observed low permeability characteristics of the clayey native material in the subsurface at the site, the extent of this diesel contamination is not anticipated to extend a great distance beneath the building.

Groundwater on the north portion of the Avis Sales Lot has been confirmed to contain gasoline and the BTEX group of compounds. This was confirmed by chemical analyses during Geotech Consultant's May, 1991 site investigation. Based on analytical results of groundwater samples collected during this work, contaminant levels in groundwater from monitoring wells MW1 and MW3 have decreased in the 5 months since the May, 1991 sampling event. The decreases indicated are to below MTCA cleanup levels for all constituents except gasoline in MW3 at 3 ppm. This concentration has decreased by about an order of magnitude since the May, 1991 results.

An analysis for TPH by Modified EPA Method 8015, indicated mineral spirits contamination at 5 ppm in MW3. Mineral spirits contamination was not identified in MW1 or MW6.

Groundwater flow and gradient were not part of the scope of work for this project. Monitoring well MW6 was placed in an inferred down gradient direction based on Geotech Consultant's previous study of the Avis Sales Lot. MW6 was constructed in accordance with WAC 173-360, and developed and sampled in accordance with generally accepted professional practices. Analytical results from the BTEX and TPH analyses conducted on the groundwater sample from MW6 identified only benzene at 22 ppb. This is above MTCA cleanup levels.

The discharge of water from the 16" abandoned sewer pipe through the 4" concrete pipe from Bakker's property may have contributed to an artificially high groundwater gradient in the area to the north of the Avis building at the site. Water was observed to discharge at a rate of greater than 200 gallons on 24 September, 1991 into the excavation. The source areas for this discharge (floor drains in Bakker's laundry processing rooms and steam boiler room) have subsequently been plugged. Continued groundwater level monitoring would be necessary to support this theory.

Based on this information, Petroleum Services recommends that further groundwater gradient study be conducted to determine groundwater flow direction at the site. Petroleum Services further recommends that a program of continued monitoring of groundwater at the site be conducted to track the effect of soils removal on groundwater contamination.

A City of Bellevue 16" diameter abandoned concrete sewer pipe was discovered during the Cleanup Action. A steady flow of water was discharging from the pipe and subsequent actions to excavate and identify the source of the water were conducted. The City of Bellevue was notified and became involved with decisions made regarding the abandoned pipe. The pipe was not on any researched sewer maps and the timing of its abandonment has not been determined.

Excavation of the 16" concrete pipe led to the discovery of a 4" concrete pipe that was plumbed into the 16" pipe and responsible for discharging water onto the Avis Sales Lot. The 4" pipe was observed to exit Bakker's Fine Dry Cleaning property located to the east of the Avis Sales Lot. Upon discovery of the 4" pipe and water discharge, samples of the water were collected by Petroleum Services and a representative for Bakker's. Analytical results of the water samples indicated the presence of chlorinated organic compounds, specifically, trichloroethylene at 11 ppb and tetrachloroethylene at 1600 ppb. The source of water was determined to be laundry processing rooms and a steam boiler room at the Bakker's facility. The duration of discharge of chlorinated organic compounds from Bakker's Fine Dry Cleaning facility is unknown. Also unknown is whether other constituents may have been discharged at prior times.

Based on this development during the work, groundwater from the monitoring wells to the north of the Avis building were also sampled for chlorinated organic compounds by EPA Method 601/8010. Table 10 presents the results of the groundwater analysis.

Table 10

Groundwater Sample Analytical Results
by EPA Method 601/8010
in parts per billion (ppb)

Analyte*	MW1	MW3	MW6	MTCA Method A Clean Up Levels for Groundwater
1,1-Dichloroethane	34	ND	3	
Trichloroethylene	9	ND	ND	5
Tetrachloroethylene	7	ND	ND	5

* = chlorinated organic compounds identified in analysis
ND = none detected at or above the method reporting limit

A copy of the laboratory analytical results with chain of custody records is attached to this report.

MW1 is located in close proximity to the area where the 4" pipe was discharging water. MW1 is located in close proximity to where the 16" concrete pipe that was fed by the 4" pipe was discharging into the Avis property from Bakker's Fine Dry Cleaning's laundry processing room and steam boiler room. Water from this source has been confirmed by chemical analyses from two independent laboratories to contain detectable levels of chlorinated organic compounds. This information supports a conclusion that Bakker's Fine Dry Cleaning is responsible for chlorinated organic compounds contamination in groundwater at the Avis Sales Lot.

Mineral spirits contaminated soils were identified in the north east corner of the site adjacent to the Bakker's Fine Dry Cleaners' property. The Avis property does not appear to be a source for this contamination. Field observations indicate that it spread onto the Avis site from the Bakker's property.

The full extent of the mineral spirits contaminated soils in the north east corner of the Avis site was not removed for these reasons:

- o further excavation in a northerly direction was unsafe because the contamination extended beneath the Washington Natural Gas pipeline and the Puget Sound Power and Light Company underground electric cables in the north east corner of the lot and;

o the contamination appeared to cross Bakker's Fine Dry Cleaning property boundary to the east.

Closing Statement

This work was performed, and this report prepared, in accordance with generally accepted professional practices for the nature and conditions of the work performed. It is intended for the use of Avis Rent-A-Car for specific application to the Avis Sales Lot in Bellevue, Washington. No other warranty, express or implied, should be understood.

The observations, interpretations, and recommendations presented in this report are based on the data obtained from the samples, and other data contained herein and on the assumption that subsurface conditions do not vary from those found during the course of the investigation and cleanup work. If any variations for this project are encountered during any further investigation or excavations for this project, Petroleum Services should be notified so that supplemental interpretations can be made. The observations and interpretations of this report are intended only for the area investigated and are inferred to adjacent areas.

June 2, 1989

It was determined by site inspection that the Avis building is supported by auger cast piles.

During soil excavation, some petroleum product was released from the oily soil onto the ground water in the excavation forming a floating product film. When the maximum practical excavation limits were reached, soil samples were collected from soil at the bottom of the tank excavation, the north sidewall, the east sidewall, and the excavated tank backfill material. Northwest Enviroservice returned and skimmed the floating product film from the ground water surface for processing and disposal. PEMCO planned to skim any additional floating product from the ground water surface prior to backfilling the excavation with pea gravel.

- o March 31, 1989. Laboratory test results indicate that some contamination associated with the 500-gallon waste oil tank exists in the soil under the Avis building and the underground utilities at the east limits of the excavation (see Table 4).
- o April 4, 1989. Approximately 19 tons of contaminated soil shipped to Cedar Hills Landfill for disposal.

CONCLUSIONS AND RECOMMENDATIONS

Satisfactory removal of two USTs at the Avis Rent A Car facility has been accomplished to the extent that soil removal is feasible. Based on a comparison of the test results in Table 4 and the soil cleanup guidelines in Table 2, a relatively minor exceedence of benzene and total petroleum hydrocarbons exists under the Avis Rent A Car building, and a minor exceedence of total petroleum hydrocarbons exists under the utilities located to the

east of the former waste oil tank. Due to the low levels of contamination remaining, the low permeability characteristics of glacial till fill, presence of the existing building and underground utilities, and the lack of downgradient receptors, we do not believe any additional remedial action is feasible or warranted or that long-term monitoring is necessary. A photographic record of site conditions, as well as all field memorandum documenting UST removal activities, will be maintained in our files to support this conclusion.

We trust that this report meets your current needs. Please contact us if you have any questions.
